石 灣 陶 器 簡 介

石灣位於廣州附近，係陶器名鎮，素稱「廣窖」。遠在宋代，即已開始生產，品類繁多。舉凡日用器皿，人物塑像，動植造型以及裝飾假山盆景之亭台閣榭，莫不應有盡有。

石灣出品以彫塑陶器歷史最久，手工最精。作品大多取材於現實生活，在簡練的造型上，或作適當的誇張，表現了大胆的概括與集中。所塑人物、鳥獸，形態畢肖，栩栩如生，令人感到有生命力，為各界所喜愛。

其器皿，用具，除仿古外，作者並能發揮想像力創造力，就自然物之形象，經過大胆變形，精巧構思，成品既實用，又美觀。

陶釉為石灣陶器之一特色。歷年仿做各地名窖，如禹鈞窖、哥窖、建窖等，吸其優點，集其大成。如今常見者有鈞釉、璧裂釉（冰紋開片）、石榴紅、古銅、無錫釉等。其「釉變」不論天然抑或人工，莫不渾厚濃潤，斑斕壯麗，而不浮華。

近年來，為了發展此種優秀的民間藝術，許多藝人及美術工作者，致力於石灣陶器的設計與生產的研究。我公司為適應國際市場需要，在品種及包裝上作了一系列的鑽研，並在其他各方面作了顯著之改進。凡我們所供應貨物，品質高尚，價格相宜，如蒙惠顧，無任歡迎。

A BRIEF INTRODUCTION TO SHIWAN POTTERY

Shiwan is a town near Canton, famous for its ceramic works, historically known as Kwang Yao (Canton kiln). Numerous types of pottery have been produced there ever since the Sung Dynasty; they comprise utensils for daily use, human figures, animals, plants, decorative toy pavilions & terraces for artificial hills and potted sceneris, etc.

Among Shiwan products, the carved articles have the longest history and present the most scrupulous workmanship. They are mostly based on realistic life, characterized by simplicity and sometimes by mild exaggeration and producing the effect of daring generalization and concentration. The human figures and animals thus made are lively and so true to the original that they inspire a feeling of the vigour of life. Shiwan pottery, therefore, has been attracting universal admiration.

As regards the articles for daily use, the designers not only imitate the antique style, but exert their imagination and originality, and boldly modify the natural objects, with the result that their inventions are both useful and beautiful.

Glazing is an outstanding feature of Shiwan pottery. It has inherited all the merits of the famous kilns such as Chun Yao (Chunchoh kiln in Honan Province), Ké Yao (Lungchuan kiln in Chekiang Province) and Kien Yao (Chuanchoh kiln in Fukien Province). Glazes usually employed at Shiwan include Chunchoh, crackled, pomegranate red, bronze, Wushih and the like. Especially the flambé (furnace transmutation), natural or artificial, is rich, smooth, brilliant and splendid, without any levity or excess.

During recent years, a number of artisans and art workers are engaged in the research of designs and production of Shiwan Pottery in order to develop this excellent folk art. With a view to meeting the demands of the international market, our Corporation has made a series of enquiries concerning the categories and quality of the products and the way of packing and achieved much improvements in many other respects. The articles we supply are of the best quality, their prices most competitive. Enquiries and orders are always welcome.

星群中藥製劑介紹

一、概 說

我國醫藥事業有悠久的歷史，歷代出現了很多名醫對醫藥學術作了很多重要的貢獻，醫藥方面如公元後二百年（後漢時代）的華佗是世界歷史上最初使用麻醉藥的第一人，公元前春秋戰國時代的扁鵲是發明用脈學診斷的始祖，漢代的張仲景總結了漢以前的醫學，並加以發展，寫成傷寒論及金匱要略，金匱要略經等書，後人稱之為「醫聖」又葛洪發明恙虫病及最初採用含碘植物治甲狀腺腫，在明代時我國首先盛行以牛痘方法預防天花，藥學方面在漢代即有神農本草經的重要典籍，五世紀時，藥學專家曹敬著炮炙論，奠定了中藥生藥加工的基本方法，此製藥方法其後不斷改進，明代（公元一五一八——一五九三）的李時珍編著了藥學巨著「本草綱目」此書其後傳入各國譯成英、俄、德、日等國家文字對各國藥學的研究給予很大的影響，這些都是中國醫藥者對世界的重大貢獻。

我國中藥具有顯著療效，從幾千年特別是最近五年來臨床經驗，實可證明，近年來有些患乙型腦膜炎病者，用中醫中藥治療有顯著的效果，患者身心亦能恢復正常，以中藥醫治不用刀割，亦無痛苦。

中醫師使用的中藥一般是經過修治好的生藥，即所謂熟藥，這些熟藥依照處方配膏後要經過煲煎才供服用，這些由生藥製成熟藥的修治，即所謂道古法製，是多年經驗累積而來的生藥修治方法，是有一定的科學根據的，治療功效也在日益提高。

中藥的治療功效雖然很顯著，但因體積龐大，運輸不便，常用的劑型亦僅有煎劑，藥酒和丸、散、等種，在使用上常感不便，如煎劑在使用時要經煲煎，不便於在醫院及工廠中大規模使用，因此中醫藥界早有改良中藥製劑的要求。

我廠為醫藥界人士所創辦，廣集技術人材，對改良中藥製劑作大規模和深入的研究，目前已製成單味中藥 247 種，本年夏初將再增加 26 種，古方成藥目前有 21 種，本年夏初將再增加 14 種。單味中藥有如下優點：可代用煎劑，可依處方調劑，又能保存，使用方便，規格統一等；古方成藥的優點是：體積少，可溶解，功效一定等優點，經過五、六年來臨床實驗，證明本廠創製的中藥製劑，功效良好，且價格低廉，優點甚多，為醫師及醫院所樂用，故成品已暢銷國內外。

我廠製品因為含量標準是根據煎劑的分析而來，原料經用切片，染色後，在顯微鏡下檢視及含量測定方法，檢驗半製品，製品均經化驗合格始行出廠，故能保證製品有良好的質量，在臨床使用上也獲得好評。

例如：杜仲酊，不僅可用於治筋骨痠軟無力，衰弱性腰痛等，而且為醫治高血壓的實效藥，經臨床試驗，結果在 53 人中，血壓降低在原來的血壓者 10% 以上，最高血壓

過程中，不但使患者極易忍受，並且絕對無毒。

我廠製造的益母草流浸膏是用 28% 的醇抽出，成品含醇 18%，劑量一次一至四毫升。好些醫界人士，倡議試用益母草以代用麥角，因此，我廠製造的益母草已經好些醫院和診所採用。「益母草的水浸膏與乙醇浸膏對整體子宮與離體子宮均有興奮作用，（對於在位子宮，興奮前尚有一短時間的抑制作用，但經乙醇提取後的水溶液，則無此種抑制作用，因此，益母草可能含兩種成份一為抑制性，一為興奮性）；又益母草所含的生物鹼（益母草鹼甲）對整體子宮及血脈均無作用，但對離體子宮有顯著的興奮作用，因此，不能代表益母草對整體子宮的作用」。「利用家兔離體子宮實驗（靜脈注射給藥）及子宮痙攣實驗，證明益母草是子宮興奮藥，——益母草葉有興奮子宮作用，加強收縮力與緊張力，加快節律，而毒性甚弱，適於臨床試用」又據朱鼎氏（中藥之科學原理）謂「益母草流浸膏對於產後期家兔子宮的作用，在離體子宮滴加少量的益母草流浸膏，則見子宮收縮的頻度增加，張力亦見上升」。綜觀我國學者的研究均證明益母草代用麥角製劑在藥理上是有根據的。

牽牛子脂瀉片（又名黑白丑）我國中醫久用為瀉下藥，印度醫師亦用為瀉藥，功效卓著，故英國藥典於一九一四年即採用為藥典法定藥品，現列入英國藥方集（B.P.C.）我國對此藥與英國、日本兩國一樣同樣列為法定藥品，本廠於一九五一年依中國藥典規格之牽牛子脂製成片劑甚得醫界好評，此藥片為強力瀉藥，倘服用少數量可於數小時通大便，便時無痛苦，亦無副作用。

鹽酸黃連素片，為一種有效的治細菌性痢疾藥物，在試管中，黃連素對赤痢桿菌，大腸桿菌等十種細菌均有抑制作用，據余介玉氏報告用黃連素治痢病 327 例中謂黃連素用於細菌性痢疾（異型痢疾桿菌所引起）的治療，特別是成人是有肯定的效果，比磺胺更佳，並且不但沒有像磺胺類藥物那樣有胃的刺激現象，相反的，凡使用黃連素的病例，食慾均很快恢復正常，並無副作用，杭州市傳染病院亦報告用黃連素治療細菌性痢疾，124 病例，一般於三日內退熱，五日內大便培養轉為陰性，第七日大便恢復正常，用法是用相當生藥一克的醇浸液每日 4—6 次，未見有副作用。

二、中藥製劑製造前的研究工作

在設計中藥製劑製造方法之前，先對該中藥的化學成分必要的研究，認明該藥的主成份如何，並研究其化學性質及含量，測定方法，因為中藥製劑的主要用途在於代用中藥的煎劑，因此，也對中藥的煎劑的含量，求其平均值，作為中藥製劑含量的參攷標準，中藥成份的分析係利用植物化學的方法，特別着重有藥用功效的化學成份，如生物鹼（alkaloids）配糖體（glycosides）皂素（Saponin）黃鹼素（flavones）有機酸（organic acids）精油（Essential oils）等對這些成份的分析和研究，已應用到現代科學方法和儀器。

三、中藥製劑的方法

中藥製劑的製造原則上是儘量應用藥劑學的一般原理，並考慮中醫藥的特點來

• 2 •

設計製造方法，其製造的過程分為提出（Extract）其成份尤其有效成份（Active Principle）和製成適當的製劑兩個步驟，提出成份所用的製劑一般是水或不同濃度的醇，溶劑的選擇，視主成分的溶解性質，經詳細的研究後，首先考慮用熱水提出，符合中醫師歷來的經驗，但用水提出並將粘液質（Mucilage）澱粉糊（Starch）等什質提出來，因此在將提出液適當蒸濃後，須用適當方法除去此等什質，經測定含量後，再製成各種劑型。

有芳香性的藥製成水浸液後並加入其芳香水以保存原藥的芳香性成份。

一部份適宜用醇提取的中藥，（此係根據藥物含有的有效成份的溶解性質而擬定）則用醇提取。

用醇提取所取得的醇液蒸濃，製成流浸膏，濃浸等製劑，或將醇液全部蒸去酒，將所得的醇浸液製成其他的劑型，所以雖然用醇提取生藥，但製成品却不一定會含酒。

有好些中藥在藥典（Pharmacopoeia）上已有法定的製劑（official Preparation）一般可直接使用這種藥典製劑。

用於製造製劑的原料，係選用上等的地道藥材，並且經過化驗室用現代生藥學的技術加以檢驗，有些中藥品種，如黨參、有防黨、潯黨等，使用何種原料並在瓶標上加以註明。

中藥原料依習慣有酒製、炒製、炙製等處理者，製造時對此習慣及其原理亦加考慮，如認為有必要者，依法泡製，如認為無必要者，則加以省略。

我廠製品因在製造過程中採用科學的技術管理，原料，半製品，製成品均經化驗室化驗，製造操作亦有一定的操作規程，因此，可以保證成品符合規定的規格，有良好的質量。

四、劑型解說

中藥製劑的劑型大別為液體製劑及固體製劑兩類。液體製劑有流浸膏，酏劑，濃浸，糖漿，餡，濃水及浸膏溶液等劑型；固體製劑有片劑，浸膏（粉）等劑型。

各種製劑，都註明每單位（每毫升或每片或每若干克）相當於代用原藥若干煎劑。

1. 流浸膏，一般係用醇為溶劑，用滲濾法提取，生藥一克製成流浸膏一毫升，流浸膏的含醇量一般在 20% 左右，（藥典製劑含醇量一般較高約在 40% 左右）。

2. 酏劑，用稀醇作溶媒，生藥一斤製成製劑 5 斤或 10 斤，含酒精量較高，一般在 40% 左右。

3. 濃浸，濃浸一般是每 400 克的生藥製成 1,000 毫升，多是稀醇滲濾，製劑含醇約 16—20%。

4. 糖漿，係由一定量浸膏（水製浸膏或醇浸液）加入一定量的單糖漿而成的製劑。

5. 濃水及餡，濃水及餡都是一定量揮發油溶於醇中的製劑，餡的含醇量較高，濃

• 3 •

水的含醇量較低，濃水及酒精除含原藥提出的揮發油外，不含其他的浸出物。

6. 浸膏溶液，係指一定量的水製浸膏或醇製浸膏用水或芳香水或稀醇溶解製成的製劑，一般不含醇；少數含少量的醇，這是特為中醫藥師使用的中藥製劑而設計的一種新的劑型。

7. 浸膏，係將一定量的水製浸膏或醇製浸膏加入一定量的賦形藥（澱粉等）製成的粉狀製劑。

8. 浸膏片，係將浸膏製成片劑，每片含有一定量的浸膏或一定量的有效成份。

有些製劑同時有兩種劑型，這樣可便於使用者選擇，但將來仍擬淘汰其中之一，而保留一種較適用的劑型。

五、含酒問題

植物藥品的製劑因為要使較多的成份溶在少量的液體內，不能不加入多少酒精以幫助溶解，但當使用的藥品種類及數量較多時，含醇總量也會達到令對酒有敏感的人（尤其小孩）發生輕微反應，這反應多是面紅及微覺酒醉，為避免這酒的副作用，處方的中醫藥師要注意出品目錄上註明的各藥的含醇量，並計算在處方中酒的含量共達若干，並詢問病人對酒會不會過敏，假如會過敏，則將藥液再適當加熱（如用燉或蒸），使所含的酒揮發，再行服用，（對嬰孩更須如此），或在十五分鐘內分次服用，亦可減輕酒的副作用。一般常用的液體藥用於常用的處方時，（一般是 10 餘種藥），含醇的藥常只有三、四種，總的含醇量不會超過三、四毫升，對於一般病人是不會有影響的。

對盡量減低製劑中的含醇量問題，我廠已極為注意，當繼續研究，加以改進。

六、劑量問題

我廠所製的中藥製劑都記明了劑量，（標記的劑量都是一次量，一天可服二次或三次），使用時一般希望不超過規定的最大量，尤其是印有紅色“劑”字的藥如杏仁水、麻黃流浸膏等藥更絕對不要超過劑量，但如該藥並非劇毒藥，而中醫藥師使用該項中藥製劑已有經驗，認為必須用較大劑量並無危險時，得由中醫藥師決定酌量提高劑量。

如大黃流浸膏是藥典製劑，其劑量為 0.5-1.0 毫升，但藥典使用本製劑的目的多用作苦味劑，少用作下劑，而每毫升的大黃流浸膏相當於四分大黃的煎劑，故中醫藥師使用大黃流浸膏時可酌用 1-4 毫升的劑量，根據經驗，2-4 毫升的大黃流浸膏可有瀉下的功效，而無副作用。

杏仁水雖然每毫升相當杏仁五分的煎劑，但因為是劇藥，劑量不要超過二毫升。

凡劇藥，（瓶標上用紅字註明）如照中醫藥師的處方換算已超過最大的劑量時，處方的中醫藥師應減低處方的用量，或調配人員應通知中醫藥師酌量減低處方的用量，以免服藥過量，發生危險。

如白芨片，原藥不代用煎劑，故不列明相當煎劑若干，可照規定的用量處方。

在這裡並附帶說明一下容量及衡量的單位：

• 4 •

依中國藥典例，容量用毫升為單位，每市斤的水約為 500 毫升（ml），毫升亦稱公撮或西西（c.c.），可用玻璃量杯量度；衡量用克為單位，克（g.）亦稱公分或瓦，每市斤相當 500 克，每錢（市秤）相當 3.125 克，可用天秤或厘戥秤量。

七、調劑方法

調劑方法是按照中醫藥師的處方，將液體的藥和粉片類的藥分別調配，所有液體的藥可合併置入一藥瓶內，大多數液體的藥是每毫升相當原藥一錢或五分的煎劑，極少數是每毫升相當原藥三分煎劑的，如紫胡浸膏溶液每毫升相當於原藥一錢的煎劑，則處方紫胡一錢可用紫胡浸膏溶液一毫升代替，如黃不浸膏片每片相當於黃芩一錢的煎劑，則處方黃芩一錢可用黃芩浸膏片一片代替，（調劑人員對各製劑代用煎劑的數量須加注意）。

量液體藥是用玻璃量杯或量筒量，均有 10 毫升、20 毫升、25 毫升、50 毫升、100 毫升……等，一般以用 20 毫升的量杯較適宜，每量好一種藥液後最好即傾入盛裝的藥瓶中，然後量另一種藥液，這已量過上一種藥液的量杯不一定要洗過，但如由藥瓶傾取藥液入量杯時不應傾取過量，以免將過量的藥液傾回藥瓶中，致影響藥瓶藥液的質量。

兩種藥液相混和時可能有混濁生成的現象，這多半不是禁忌的問題，而是兩種藥液的含醇量不同，當藥液的含醇量有變化時，有些成份變為難溶而析出，如乳香等，當加入水時因含醇量降低，所含的乳香析出，可使全液變為乳白色，但絕不影響使用效能，可照樣服用。

當液體藥若干種已量齊後，要檢查有沒有忘記量的，或量錯的，然後加蒸溜水或沙濾水或冷開水至總量達一定的容量，即達到藥瓶中一定的格數然後在瓶標上註明用法及用量。

同一處方中如另有藥粉或藥片，最好不要加在藥液內，因為藥粉藥片在藥液中不易溶解，應該另包，註明在服藥液時同時服用。

中藥調劑時有沒有禁忌呢？這問題現在還沒有發現，因為中藥絕大多數都是植物藥，植物藥與植物藥之間較少禁忌的問題，極少數兩種藥液相遇時有混濁或沉澱的現象，但這主要是酒精的濃度改變，有些原來溶解的東西變為不溶解。（如乳香等，黃連相等），而不是禁忌問題，中藥製劑的禁忌，目前還沒有發現問題，一般中藥製劑的禁忌，可依照中藥的煎劑慣例。中藥製劑因為是個別提煉製劑的，故沒有“先煎”“後下”的問題，即不論處方有無註明“先煎”“後下”，都是一樣調配。

中藥製劑的調劑室一般須具備下列設備：這些設備在出售化學儀器的店或較大的藥房均有出售。計開：10 毫升至 50 毫升的量杯，或量瓶三、四個，玻璃棒三、四支，100 克的天秤一架，骨匙二、三支，沙濾缸一個，或有下列口的蒸溜水瓶（約 500 毫升容量）一個，中型的（120mm，180mm）玻璃漏斗二個，濕的及乾的毛巾各一方，此外最好還有銅的水浴鍋一個，鉄架，鉄環各一、兩個，250 毫升的燒杯兩個，火酒燈一個，以便必要時可以蒸去含醇較多的製劑中的酒精。

• 5 •

八、製劑保管問題

中藥製劑一般要存放於冷暗處，切不可給日光直晒；取用後要隨即塞好瓶塞，如原有螺旋的電木蓋的瓶蓋蓋的，必要時可換用較長的軟木塞。

粉片劑更要塞好（必要時換木塞），以免藥粉或藥片吸收空氣中的水份變成潮濕，如有潮濕現象，可隨即烘乾。

如藥房中自備有砂塞的硬質玻璃瓶，可轉換至硬質瓶中，液體藥用小口的瓶，粉片類用廣口瓶，但瓶子應先洗淨，烘乾。

藥液存放一些時候，常會有沉澱析出，這是植物藥液體製劑的常有現象，一般不影響藥效，可自行過濾，繼續使用。

藥液因保存不善而致有浮面的白膜或發霉、發氣泡等現象；藥片、藥粉如有發霉現象，即表示藥品已有變質，不可再行使用。

中藥製劑的有效期限，像一般植物藥的藥典製劑一樣沒有規定，依經驗，一般原庄劑品在兩年內仍可保持療效。

九、結語

以上簡單地對我廠的中藥製劑作了概括的說明，有些中醫師曾提出的問題已在此說明書上作了簡單的答覆，但最近亦有些中醫師曾提出清熱涼藥經提煉後是否會影響藥效，經臨床試驗結果證明不但會減低藥效而且增大清涼退熱的效能，特在此作補充答覆，最後要提出的是：中藥製劑還在發展和擴大製造階段，技術上好些問題還沒有百分之一百解決，製劑有什麼缺點，請不吝氣的指出，各藥劑之臨床功效如何，請各醫師醫院時常提出報告，以便我廠能參考研究並改進，不斷提高中藥製劑的質量。

本廠出品之中藥製劑，不僅在國內已為各中醫師醫院診所樂用，而且暢銷於新加坡、馬來亞各地，均獲僑胞好評，緬甸、暹羅、泗水等地的中醫亦樂意使用及推廣，目前在新加坡設有總代理，專事馬來亞、英屬婆羅洲的供應工作，特此加以介紹。

CHINESE MEDICAL PREPARATIONS OF SING KYN DRUG HOUSE, CANTON, CHINA.

I. INTRODUCTION

Chinese medicine has had a long history. Generations after generations, noted physicians had made important contributions to the medical science. At about 200 A.C. (Hou Han dynasty) Hua To was the first man to use narcotic. Before the Christain era during the time of Chun Chau Chin Kwok there was a man named Pien Chiao who discovered feeling pulse as a means of diagnosis. In the Han dynasty Chang Chung-ching summarizing the medical theories before his time enriching them by his own originality wrote such books on medicine, as Essay on Typhoid, Chin Kuei Yao Lueh and Chin Kuei Yu Shen. Hereafter he was known as the "medical sage." Later Ko Hung discovered the disease, Japanese riverfever, and was the first man to use drugs containing iodine to treat exophthalmic goiter. As far back as the Ming dynasty, the use of human-vaccine for the prevention of smallpox was invented.

As to pharmacy ever since the Han dynasty, we had the Shen Nung Pen Tsao Ching, an important writing on materia medica. At the fifth century a pharmacist named Tsao Ching wrote a thesis on the heat treatment of herbs, which had laid down the fundamental methods for the treatment of crude drugs, which had been improved from time to time. In the Ming dynasty, Li Shi-chen compiled a magnificent work on materia medica, called the Great Herbal. This book had since been translated into English, Russian, German, Japanese and other language, which had greatly influenced the research on pharmacognocny in many countries. Such are the many contributions, Chinese medical men made to the world at large.

That for thousands of years, we had maintained a large and ever increasing population, we must give credit to the part Chinese medicine, our valuable national heritage, play in the preservation of national health.

Chinese medicine is very effective. In the past thousands of years and especially for the past five years, clinical experiences had proved that hopeless cases of meningitis had been cured by Chinese physicians with Chinese drugs in a very short time without mental or physical defects. Chinese physicians in the treatment of hemorrhoid need not resort to operation, and the patients

suffer no pain in the course of treatment.

The medicines which Chinese physicians used are generally crude drugs that have been treated and are called refined drugs. The treatment of Chinese drugs is the consumption of long years of experiences having due empirical ground. But at the present time when sciences have advanced by leaps and bounds, in order to render greater service to the preservation of health of our people, changes need be made in many cases in the way of treatment in Chinese drugs.

In as much as Chinese drugs are very eminent in their medicinal effect, but being too voluminous are difficult to handle in transportation. The preparations generally used are in such forms as decoction, tincture, pill, and powder, some of which are very inconvenient to use. As for example most of the decoctions are to be prepared by boiling just before taking. These forms of preparations when used extensively in hospitals and factories are very inconvenient. Therefore for some times Chinese physicians have urged for a change to be made in the methods of preparation in Chinese drugs.

The Sing Kyn Drug House was organized by noted physicians, getting together technical men to investigate intensively as well as extensively on the improvement in the manufacturing of Chinese medical preparations in large scale. At present we have succeeded in preparing 247 single drug preparations and expect at the beginning of the summer session to add 28 to this list. We have prepared 21 kinds of ancient patent medicine and expect to increase this number by 15 this summer. The single drug preparations are advantageous in that they can be used in peace of decoctions and can be dispensed according to prescriptions, are convenient to use and standardizing in quality and can be preserved. The advantages of our ancient patent medicines are definite in medical effect and are compact in size and soluble. Five to six years of clinical experiences demonstrated that the preparations prepared by our drug house are potent in effect, standardizing in quality and low in price. They are well welcome by physicians both at home and abroad. By way of example we may dwell briefly on a few preparations as prepared in our drug house.

For example, Tincture of Euonymus is not only effective in the treatment of skeletal weakness and Lumbago, it is also an effective remedy for high blood pressure. The preparation is easy to take and is not at all toxic.

The Fluidextract of Leonurus can be used in place of ergot, and has been used by many physicians, hospitals and clinics. The therapeutical functions of Leonurus have been substantiated by many specialists. Lu Fu-hua's experiments by means of isolated rabbit uterus and uterine sistula, have proved that Leonurus

is a uterine stimulant. Leaf of Leonurus has a stimulating effect on the uterus increasing uterine contraction, tension and rhythmic frequency, it is only slightly toxic and suitable for clinical purposes. Chui Ni-se found that on addition of a small amount of Fluidextract of Leonurus to the isolated uterus of confined rabbit contractions increased in frequency and tension raised. Research of specialists all over China, pointed to the fact that the Leonurus in place of ergot is pharmacologically sound.

Pharbitis has long been used as an effective laxative in China, and in India it has been used also for the same purpose. Therefore in 1914 the British pharmacopoeia listed Resin Pharbitis among the official drugs and it has since entered the B. P. C. It is also an official drug in the Chinese pharmacopoeia. Our drug house prepared Pharbitis Resin in tablet form. It has met with good approval as an effective laxative. Only a small amount when taken induces evacuation of the bowel in a few minutes.

Berberine Hydrochloride (Berberine being the active principle of coptis) is an effective remedy for bacterial dysentery. Yue Kai-yoh's report in 327 cases of bacterial dysentery proved that Coptis is very effective as a remedy for bacterial dysentery, especially in the case with adult. It is even more effective than sulfaquanidine. Patients taking coptis do not suffer from any side effects, and appetite is easily restored. Hospital for Infectious Diseases in Hangchow reported that in using coptis for bacterial dysentery, in 124 cases fever reduced usually in three days, and in five days stool culture being changed into negative and stool became normal in seven days.

II. INVESTIGATION MADE PRECEDING MANUFACTURING OF PREPARATIONS

Before deciding upon the method we are to use in the preparation of any one Chinese drug, we first make a detail study of its chemical composition, determine its active principle, and study the chemical properties of the latter, and decide upon the method of determining it quantitatively. Since the main purpose of the preparations in Chinese drugs is to use them in place of the ingredients of a decoction, therefore it is important to find out the average quantity of the active principle of a drug contained in a dose of decoction, and use it as a standard in the preparation of the same drug.

For the analysis of Chinese drugs, we employ methods of plant chemistry. Special stress has been made on the analysis of those parts in Chinese drugs that have medicinal effect. We have made use of the most up to date methods

and apparatus for the study and analysis of such chemical compounds as alkaloids, glycosides, saponins, flavones, organic acids and essential oils.

III. METHODS OF PREPARATION IN CHINESE DRUGS

In determining the methods used in the preparation of Chinese drugs beside adhering closely to the principles of pharmacy we at the same time paid due regard to Chinese medical traditions. The process of preparing Chinese medicine is divided into two steps. The first step is extraction especially the extraction of the active principle. The second step is to prepare the extract into proper form for use. For extraction the solvents in general used are either water or alcohol in different concentrations. In determining what solvent to be used for the extraction of the active principle of any one Chinese drug we first make a detail study of its solubilities in different solvents. Extraction by water is in coherent with Chinese medical tradition. But extraction by water foreign matters such as mucilage, starch are also extracted out together with the active principle. Therefore foreign matters must be removed by proper means from the extracted solution after concentration. After determining the quality of the active principle in the extraction we use it to make different preparations.

In preparing aromatic drugs, after being made into aqueous extracts, we add to each of them the particular kind of aromatic water, so as to restore the aromatic nature of the original drugs.

In accordance with the solubilities of the active principles of some Chinese drugs, we determine to use alcohol for their extraction. After extraction by alcohol, we concentrate the extracted solutions into such forms as fluidextract and concentrated infusion. We may drive away all the alcohol from an alcoholic extracted solution and obtain an alcohol extract and use it in different preparations.

There are some Chinese drugs already included in the Pharmacopoeia as official drugs, and can be used as such.

The raw materials we used in our preparations are the best kind of natural drugs. They are tested in the laboratory with modern technique in pharmacognosy before being used.

Some of the Chinese drugs are of different species such as Tang-shen. We have the Fang-tang and Lu-tang. As to which species we used indicate it in the label.

In the treatment of crude drugs, Chinese medical practices usually employ the following method. Frying or roasting as such treating with alcohol or treating with honey. In preparing the crude drug for use we take into consideration of the traditional practices, and retain those processes which we

considered essential.

Since we analyze our raw materials, semi-products as well as the finished products, we guarantee the quality and standard of our products.

IV. FORMS OF PREPARATIONS

The form of Chinese medical preparations may be divided into two main classes, the liquid form and the solid form. To the liquid form belonged: fluidextract, tincture, concentrated infusion, syrup, spirit, concentrated water and extract-solution. To the solid form belonged: extract-tablet, extract (powder).

In every one of our preparations we indicate each unit's (1 c.c. 1 tablet or so many grams) equivalence for a certain quantity of the original drug in a decoction.

1. Fluidextract: In general we prepare fluidextract by percolation using alcohol as solvent. For every c.c. of the finished product one gram of the crude drug is used. The alcohol content of a fluidextract is generally 20% (the alcohol content of a fluidextract in the Pharmacopoeia is higher being 40%).

2. Tincture: In preparing tinctures we use alcohol as solvent. One katty of the crude drug is used in preparing 5-10 katties of a tincture. The alcohol content of a tincture is comparatively high generally being 40%.

3. Concentrated infusion: In the preparation of concentrated infusion, we use 400 grams of the crude drug to make 1000 c.c. of the finished product using dilute alcohol for percolation. The alcohol content of this kind of preparation is about 16-20%.

4. Syrup: Syrup is a preparation made by adding a definite quantity of either the aqueous extract or the alcohol extract to a definite quantity of simple syrup.

5. Concentrated water and spirit: Both concentrated water and spirit preparations contain only those essential oils extracted from crude drugs, without any impurities. The alcohol content in spirit is higher than that of concentrated water preparation.

6. Extract-solution: Extract-solutions are made by dissolving a definite quantity of either the aqueous extract or alcohol extract in water, aromatic water, or dilute alcohol. They contain little or no alcohol. Extract-solution is a new form of preparation made to meet the demand of Chinese physicians.

7. Extract: An extract is a preparation in powder form prepared by adding a definite quantity of excipient such as starch to a definite quantity of either the aqueous extract or alcohol extract.

8. Extract-tablet: Extract-tablet is a preparation made by putting an ex-

tract into tablet form. Each tablet contains a definite quantity of an extract or an active principle.

V. ALCOHOL CONTENT

In preparing Chinese medicine from herbs, in order to reduce the volume of the finished products, we are often obliged to use alcohol as a solvent.

If the preparations called for in a prescription are numerous and big in quantities the total alcohol content in a dose of medicine may be so high as to cause slight drunkenness in patients susceptible to alcohol especially in the case of children. Physicians in prescribing, in order to avoid the side effects of alcohol, should take notice of the alcohol content of the different preparations as indicated in our catalogue and calculate the total content of alcohol in their prescriptions. If the patient is susceptible to alcohol, the alcohol should be driven off by such means as steaming before administering, especially with children. Dividing a dose of medicine into portions to be taken 15 minutes at a time may also reduce the side effects of alcohol. As a rule the total alcohol content in a dose of Chinese medicine would not be more than 3-4 c.c., the alcohol effect of which is negligible with most patients.

We have paid much attention to the reduction of alcohol content in our preparations. For further improvements in this matter we are still making investigations.

VI. DOSAGES

The dosages of the preparations of our drug house are indicated in the labels. (the quantity indicated is for one dose and 2-3 doses can be taken in one day) We expect physicians not to use our preparations exceeding the upper limits of their dosages, especially those marked with the red character, "drastic". Such preparations as almond water. Fluidextract Ephedra and the like should not in any case be used in excess. Preparations that are not drastic experienced physicians may use their own discretion in regard to their dosages. For example the dosage for Fluidextract Rhei in the Pharmacopoeia is 0.50-1.00 c.c. But in the Pharmacopoeia it is used as a bitter tonic rather than a laxative. Every c.c. of our preparation of Fluidextract Rhei is equivalent to 0.04 oz. (1 tael=3.125 gm) of Rhei in a decoction. So physicians if preferred may use a bigger dose of Fluidextract Rhei between 1-4 c.c. From experience 2-4 c.c. of Fluidextract Rhei would have a laxative effect with no side effects. Although every c.c. of almond water is equivalent to only 0.05 oz. of almond

in a decoction, but being a drastic drug it is not to be used beyond 2 c.c.

VII. DISPENSING

In dispensing a prescription it is best to prepare the liquid parts and the solid parts separately. The liquid parts can be mixed in one bottle. 1 c.c. of most of our preparations is equivalent to 0.05-0.10 oz. of the original drug in a decoction, very few of them contain the equivalence of 0.03 oz. of the original drug. For example 1 c.c. of extract-solution of Bupleurum is equivalent to 0.10 oz. of the original drug in a decoction if the prescription called for 0.10 oz. of Bupleurum, one can use 1 c.c. of the preparation, extract-solution of Bupleurum, in its place. If one tablet of Extract-tablet of Scutellaria is equivalent to 0.10 oz. of Scutellaria in a decoction and the prescription calls for 0.10 oz. one can use one tablet instead (the dispenser ought to be conversed with the equivalence of each preparation to the original drug in a decoction).

For measuring liquid preparations, one may use either a measuring cup or a graduate. A 20 c.c. measuring cup usually would serve the purpose. When one has finished measuring one liquid, empty it into the bottle and then measure the next. If one has emptied an excess amount of a liquid preparation, it is not advisable to empty the excess back into the original container so as not to contaminate the medicine in question.

When two liquid preparations are mixed the mixture may become turbid. This condition as a rule is not to be feared. This is due to the change of alcohol concentration in the solution causing the precipitation of some of the constituents. For example when water is added to the Tincture of Pistacia on account of the lowering of the alcohol concentration, Pistacia is precipitated, causing the solution to become milky, but the mixture can be taken just the same.

After having checked up the number and quantities of preparations used, add distilled water, filtered water or boiled water (that has been cool) to make up the required amount, and then write down the direction for taking of the prescription on the label. If in the same prescription powder and tablet are called for they are not to be added to the liquid portions, as they are difficult to dissolve and they are to be put up in separate packages, with direction given to be taken together with the liquid portion at the same time.

VIII. STORAGE OF PREPARATIONS

Chinese medical preparations as a rule should be kept in dark cool place

and should not be exposed to direct sun-light, have to be stopped up right after using. If the preparation comes with a plastic screwed, it is best to use a longer soft wood stopper instead. To prevent powders and tablets from absorbing water stoppers may be changed if necessary. It is advisable to rebottle the preparations in ground glass stopper bottles, if one has any. If powders and tablets have absorbed moisture, it is best to drive the water away in a desiccator.

After standing for some time a slight precepitation may occur in liquid preparations. This is often the case with preparations prepared from herbs. This is not a matter of much importance. The preparations may be used after filtered.

In case of a liquid preparation, if there is a layer of white mold on the top and bubbles are being given off, and in case of powder and tablet having evidences of molding the preparations are not fit for use.

Chinese medical preparations like other medicine in the Pharmacopoeia made from herbs, have no definite limit of time of effectiveness. With our preparations in general, they can retain their medicinal effect for two years if they are not opened.

IX. CONCLUSION

We have given a general description of the preparations of our drug house. Many questions that have been brought up by Chinese physicians have been answered in this pamphlet. Recently some Chinese physicians have inquired whether that class of the so called "cold drugs" (drugs having the power of reducing fever and inflammation) after undergoing the process of preparation, change their medicinal effect. We hereby take the opportunity to give them a respond. Clinical stations using our preparations have demonstrated that the so called "cold drugs" increase rather than decrease their medicinal effect after going through the process of preparation.

In closing we want to say that although our drug house is developing rapidly, it is only on its formative stage. Many technical problems are still to be solved. We welcome criticisms as well as clinical advices and informations in regard to the effect of our preparations, which would do a great deal toward helping us to improve the quality and method of production of our products.

Our products are not only welcomed by physicians, hospitals and clinics at home, but they are also highly esteemed by our oversea brothers in Singapore and other places in the Malay Peninsula. They are also demanded by physicians in Siam, Indo-China and Indonesia. To meet the demand for our products in the Malay Peninsula and North Borneo, we have established a special agency in Singapore.

AIR COMPRESSOR

MODEL 1-6/7

This Air Compressor is of two-stage, four-cylinder, V-construction, single acting, air cooled type. Capacity 6 cubic meters free air per minute to pressure of 7 atmospheres.

It is driven by a direct-coupled 40 KW. motor. The compressor, motor, and intercooler are all mounted on a frame work, equipped with manometer and safety valve.

Air cooling of cylinder is effected by fans. Lubrication by splash method. Air receivers are of two sizes, namely: 0.25 cubic meter and 1.31 cubic meter respectively; any or both of them may be equipped if required.

The machine is suitable for use in building construction works, mines and workshops to supply energy to pneumatic tools.

1A" Centrifugal Type Water Pump

INTRODUCTION

Water pump is a kind of Machinery for pumping water from a lower level up to a higher level. Mines, Factories, Fundamental Constructions use water pumps for transporting water, supplying water and displacing water. Agricultural productions also utilise water pumps to fight against nature disasters.

There are many kinds of Water Pump, but the most effective and of widest usage ones are the Centrifugal Type Water Pumps. The main advantages of the Centrifugal Pumps are as follows:

- (1) Simple and strong construction.
- (2) Low cost of manufacture.
- (3) Easily transportable.
- (4) Easy handling and operation.
- (5) Low cost of maintenance.
- (6) Stoppages and non-functioning can hardly occur.
- (7) High pressure and great capacity.

HYDRAULIC CYLINDRICAL GRINDING MACHINE

Model M115

This machine is designed for plain cylindrical and taper grinding of workpiece up to 150 mm in diameter and 750 mm in length.

During operation, the workpiece is held between the dead centres and is driven by a driving dog fixed in the headstock face plate.

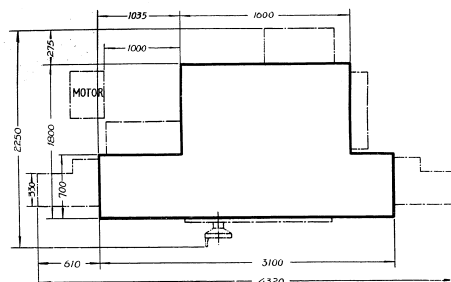

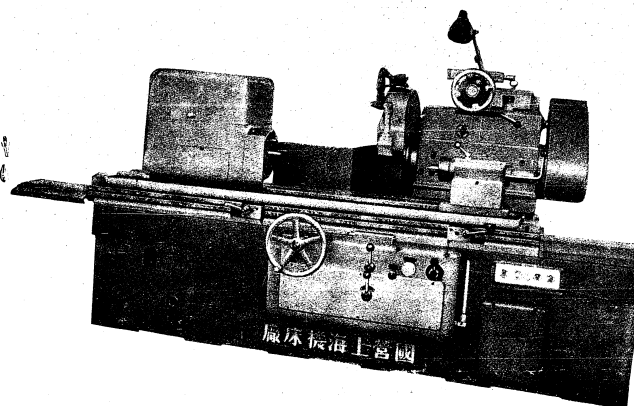

The upper working table may be swivelled to a desired degree for taper grinding. The machine is equipped with hydraulic drive unit, by means of which the following functions are made possible:—

- (1) The longitudinal travel of table.
- (2) The rapid advance and back movement of grinding wheel and the intermittent feed of grinding wheel during the travelling of table.

The machine is fitted with hand-operated table travelling mechanism and grinding wheel feeding mechanism. The wear of grinding wheel can be compensated after adjustment. The electric system consists of four independent motors.

SPECIFICATION

1. **Main dimensions:**
 - Height of centres (over table) 125 mm.
 - Max. distance between centres 750 mm.
 - Distance between centre line of grinding wheel spindle and centres:
 - Max. 425 mm.
 - Min. 225 mm.
2. **Size of Working Table:**
 - Diameter of workpiece that can be ground:
 - Max. (with centre rest) 60 mm.
 - Max. (without centre rest) 150 mm.
 - Min. 0 mm.
 - Max. length of workpiece that can be ground 750 mm.
 - Working table, headstock and tailstock:
 - Max. longitudinal travel of table (hydraulic & manual) 780 mm.
 - Max. swivel of table 6°
 - Taper in centres of headstock and tailstock Morse No. 4
3. **Wheelhead:**
 - Max. travel of wheelhead: Manual 150 mm.
 - Power 50 mm.
 - Graduation of cross feed dial 0.005 mm.
 - Dimensions of grinding wheel:
 - Max. diameter 600 mm.
 - Min. diameter 450 mm.
 - Width 60 mm.
 - Bore 305 mm.
4. **Capacity of Machine:**
 - Work spindle speeds 75,150,300 rpm.
 - Traverse speed of table (hydraulic):
 - Max. 10 m/min.
 - Min. 0.08 m/min.
 - Feed rate for rapid advance and back movement of wheelhead 2 m. min.
5. **Motors: 3 phase, A.C.**
 - for Wheelhead:
 - Power 5.8 KW.
 - Speed 1500 rpm.
 - for Work spindle:
 - Power 0.8 KW.
 - Speed 1000 rpm.
 - for Hydraulic pump:
 - Power 1.7 KW.
 - Speed 1400 rpm.
 - for Coolant pump:
 - Power 0.05 KW.
 - Speed 3600 rpm.
6. **Overall dimension**

HYDRAULIC CYLINDRICAL GRINDING MACHINE

Model M125

This machine is intended for grinding cylindrical and tapered surfaces of workpieces up to 250 mm. in diameter and 1000 mm. in length. The workpiece is set on two dead centres and rotated by means of a driving dog on the face plate. In grinding tapers, the working table can be swivelled to fit the work.

The machine is equipped with hydraulic driving system, by means of which the following functions are made possible:—

- 1) Reciprocating movement of table.
- 2) Rapid feed and withdrawal of grinding wheel.
- 3) Intermittent feed of grinding wheel.

The machine enables grinding up to the limit stop and provides means for compensating wheel wear.

SPECIFICATION

1. Capacity:—		
Max. distance between centres	1000 mm.
Length of workpiece that can be ground	1000 mm.
Height of centres from table	100 mm.
Height of centres from floor	1000 mm.
Max. diameter of workpiece that can be ground with grinding wheel of ϕ 750 mm.	250 mm.
Min. diameter of workpiece that can be ground	10 mm.
Overall dimension (L x W x H)	4320 x 2225 x 1500 mm.
Net weight	6000 kg.
2. Working table and bed:—		
Max. longitudinal traverse of table	1085 mm.
Table traverse per revolution of hand-wheel:	Rapid	24 mm.
	Slow	4 mm.
Hydraulic table traverse speed	0.1-10 m/min.
Max. table swivel	1:10 inclination
3. Carriage for grinding wheel:—		
Grinding wheel dimensions:		
Minimum diameter	500 mm.
Maximum	750 mm.
Face	75 mm.
Hole	305 mm.
No. of spindle speeds	2
Range of spindle speed	860-700 rpm.
4. Cross feed mechanism of grinding wheel carriage:—		
Traverse of grinding wheel carriage leadscrew	250 mm.
Traverse of grinding wheel carriage hydraulic drive	50 mm.
Traverse of grinding wheel carriage per revolution of hand wheel	1 mm.
Diameter of workpiece ground off per dial graduation	0.01 mm.
Diameter of workpiece ground off per dial graduation with adjustable stop	0.005 mm.
Intermittent feed per tooth of ratchet wheel (traverse of grinding wheel carriage)	0.01 mm.
5. Headstock:—		
Taper of centre	Morse No. 5
Diameter of face plate	200 mm.
Speed of face plate	40-350 rpm.
6. Tailstock:—		
Taper of centre	Morse No. 5
Extension of spindle bushing	35 mm.
Diameter of spindle bushing	80 mm.
7. Hydraulic transmission system:—		
Hydraulic pressure	9 kg./cm ²
Capacity of oil pump	50 kg./min.
Capacity of coolant pump	22 kg./min.
8. Electric driving system:—		
Motor for grinding wheel carriage:	Power	10 KW.
	Speed	970 rpm.
Motor for oil pump:	Power	28 KW.
	Speed	1420 rpm.
Motor for headstock:	Power	1 KW.
	Speed	940 rpm.

N.B.—For improvement of the machine, we reserve the right to alter either the design or the specification.

SINGLE-PAN PROJECTION READING ANALYTICAL BALANCE

Latest scientific researches have enabled us to offer to the public an entirely new model of analytical balance, the construction of which is made possible by the employment of a principle vastly different from that hitherto used. Instead of the conventional 3 knife edges and 2 pans, the new balance has only 2 fine agate knife edges and 1 pan. Its weights are loaded on a support suspended to one end of the beam with a counter weight fixed to the other end. These weights can be readily detached from or reloaded onto the support by means of remote control knobs constructed outside the case enclosing the balance. Weighing is done by simple manipulation of the knobs by detaching the equivalent weights from the support and with the help of the electric projected vernier, the accuracy of reading therefrom can reach 0.05 mg. The result of the weighing can be easily readable from the optical scale specially provided for this purpose. The capacity of this balance is 100 grams.

The balance is equipped with a built-in transformer adaptable to 110v, 130v, 160v, 220v A.C. and is enclosed in a sturdy aluminium alloy case protected with anti-oxidizing laquer, with glass sliding doors and an overall size of 440×410×270 mm, weighing about 17.5 kilograms.

ADVANTAGES:

1. Accuracy:

- a. All weights are fixed inside the balance and handled with ease by control knobs outside the case. They are chrome plated to resist corrosion and thus unalterable.
- b. Constant loading on the beam eliminates bending errors and ensures uniform sensitivity up to the maximum loading.
- c. The optical reading range is 115 milligrams. All weighing under 100 milligrams is absolutely accurate.
- d. The weighing indicator scale is fixed on the front control panel.

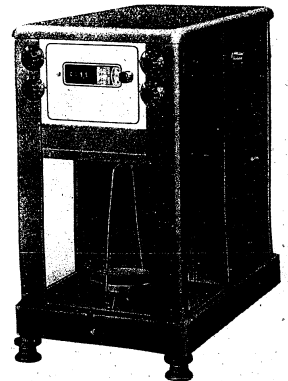

(figure 1) and it is divided into three parts:

- From 0.1 gram to 99.9 grams read directly from indicator (1)
- From 1 milligram to 100 milligrams read directly from projection scale (2)
- From 0.05 to 0.1 milligram read directly from vernier (3)

2. Rapid Weighing:

The time required for weighing with this balance is less than 1/3rd of that of an ordinary balance. After the zero point is adjusted, weighing is done simply by turning the control knobs. Every weighing can be done in less than 30 seconds. Due to the ingeniously designed air-damping device, the balance is brought to rest quickly after only a few oscillations.

Model NUCSP

Figure 1

3. Simplicity:

- No arithmetic calculation is needed since the total weight is read directly off the indicator scale.
- When weighing, simply detach weights corresponding to the article weighed by turning the control knobs, and the total weight is read right off the projection scale.

Model NCAPD

ANALYTICAL BALANCE
AUTOMATIC PROJECTION READING FOR RAPID AND RELIABLE WEIGHING

Capacity: 200 grams

Sensitivity: 0.1 milligram

SPECIAL FEATURES:

- Air-damping
- Projection Reading
- External Application of All Weights
- Zero Point Adjustment from Outside of Case

CONSTRUCTIONS:

Beam:-

Brass alloy in flat form, 140 mm long, chrome plated

Knife edges and plane:-

Finest agate

Weights:-

Brass, chrome plated

Pans:-

Slightly concave, chrome plated

Compensating suspension:-

Movable in all directions, pendulum motions of the pans without any effect upon the blocks

Air-damping:-

Without diminution of sensitivity, brings the balance to rest in 3 to 4 seconds

Projection reading with automatic light switch and adjustable device:-

Range 0.1 mg. to 10 mg, direct reading to the exactness of 0.1 mg. A.C. transformer included, applicable to house current

Mechanical manipulation of weights from outside the case:-

From 10 to 990 mg. by means of the upper dial &/or turning knob

From 1—9 g. by means of the middle dial

From 10 to 190 g. by means of the lowest dial &/or turning knob

Arrestment:

By means of central knob which also operates as switch for projection light

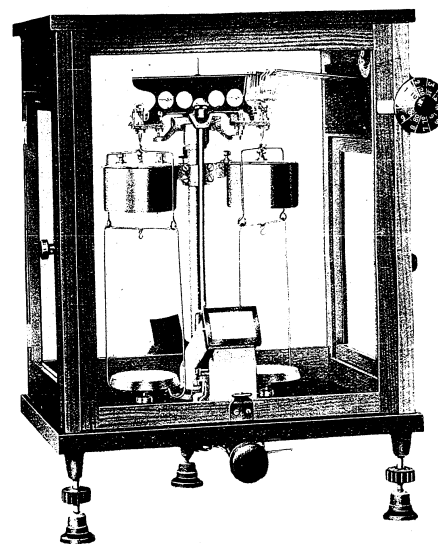

Zero point adjustment:

From outside the case by means of a small knob beside the arrestment knob

Base plate:

Mirror glass with levelling screw and shock absorbers

Model SA00G

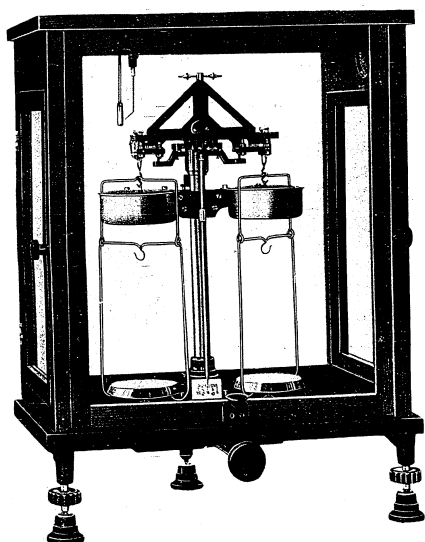

ANALYTICAL BALANCE SEMI-AUTOMATIC PROJECTION READING FOR RAPID & RELIABLE WEIGHING

Capacity: 200 grams

Sensitivity: 0.1 milligram

With all special features and similar constructions as NCPAD except that the mechanical manipulation of weights from outside the case is only for ranges of 10 mg. to 990 mg.

CHINA NATIONAL INSTRUMENTS IMPORT CORPORATION

Model FANOF

ANALYTICAL BALANCE

Capacity: 100/200 grams Sensitivity: 0.4 milligram

Beam:
140 mm long, aluminium alloy with colorless anti-oxidizing lacquer

Graduation:
To ensure accurate placement of rider, the indicating scale attaching to the beam is serrated and notched into 50 divisions from Central "0" to each side, each division representing 0.2 mg when placing a 10 mg rider on the scale

Knife edge & plane:

Agate

Rider slide:

Vertical type, spring loaded, traversing the whole length of the beam

Releasing Mechanism:

Automatically acting on hangers, beam and pans, operated from outside the case

Pans:

Chrome plated, slightly concave, diameter 73 mm

Pan supporters:

Adjustable with special spring plunger so that oscillation does not occur when setting the balance into operation

Reading Index:

20 divisions from "0" on the right to "20" on the left

Air-damping:

The swing of beam is damped by detachable air damping device

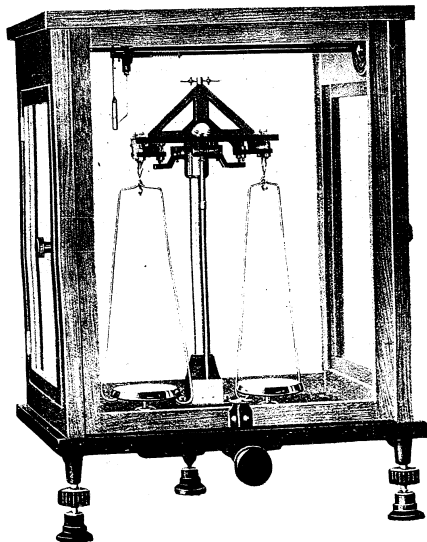

Finish:

All metal parts are protected with either chrome plating or anti-corrosion lacquer

Case:

Polished teak, with counterpoised front slide and hinged side doors. Black plate-glass or marble base. Levelling screw and bubble levelling system

ANALYTICAL BALANCE

Capacity: 100/200 grams Sensitivity: 0.4 milligram

This balance is similarly constructed as FANOF with the exception that no Air-damping device being provided.

CHINA NATIONAL INSTRUMENTS IMPORT CORPORATION

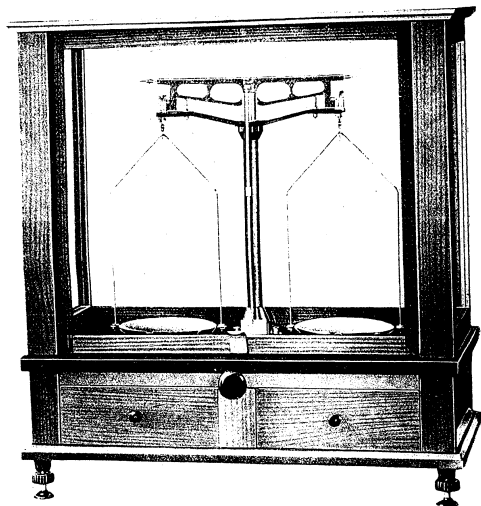

Model SNBOM

PRECISION BALANCE

Capacity: 100/200 grams Sensitivity: 1 milligram

A precision balance for schools, laboratories and/or chemical works. With rider slide. Agate knife edges and planes. Arrestment controlled by central knob.

CHINA NATIONAL INSTRUMENTS IMPORT CORPORATION

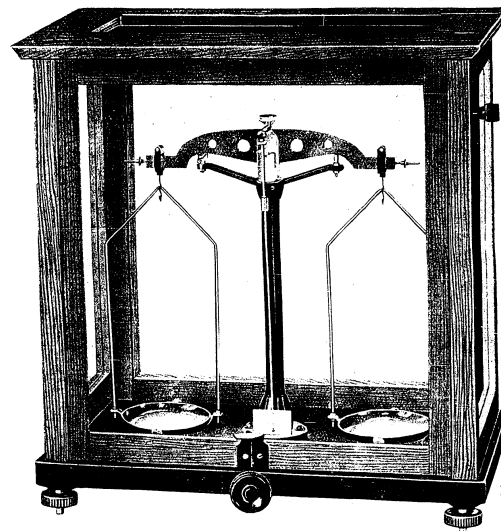

Model CTNAO Sensitivity: 4 mg.
Model CTFMG Sensitivity: 20 mg.

PRECISION BALANCE

Capacity: 100 grams. Sensitivity: 4 mg. or 20 mg.

This precision balance is specially designed for textile industries, with brass alloy beam, riderless, 2 concave bakelite round pans. These balances are contained in polished teak cases with counterpoised front slide doors, black lacquered wooden base, levelling screw and plummet.

CHINA NATIONAL INSTRUMENTS IMPORT CORPORATION

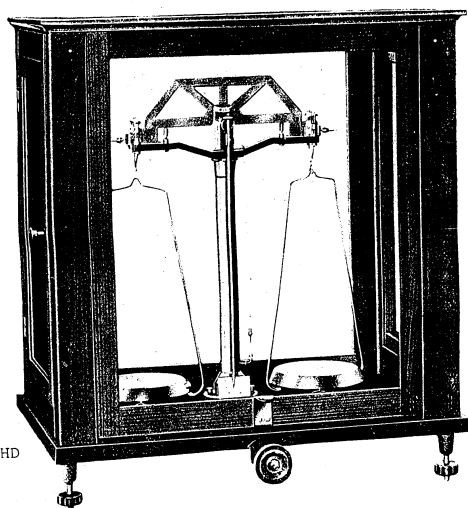

Model MAWTT

PRECISION BALANCE

Capacity: 100 grams Sensitivity: 10 milligrams

This precision balance is specially designed for mineral industries, schools and laboratories, riderless, concave bakelite pans diameter about 75 mm. aluminium alloy beam with colorless anti-oxidizing lacquer, agate knife edges and planes. The case is of polished hardwood, counterpoised front slide door, black lacquered wooden base. Levelling screw and plummet.

SPECIFIC GRAVITY BALANCE-WESTPHAL PRINCIPLE

Complete with rider weights, plummet (displacement 5 cc) with platinum wire and stainless steel hook, the thermometer connected therewith is graduated from 0 to 35 degrees Centigrade and it is for determination of Specific Gravity of all liquids up to 2 S.G. The beam of the balance is fitted with steel knife edge supported in agate channel and is precisely serrated in 10 divisions. Before leaving the factory, the balance is subjected to rigid test to conform strictly to the table herewith.

ANALYTICAL WEIGHTS

Calibrated weights of high accuracy are supplied together with our balances without extra charges. They are placed in velvet lined polished wooden box in the sequences:

100g	1	500 mg	1
50g	1	200 mg	2
20g	2	100 mg	1
10g	1	50 mg	1
5g	1	20 mg	2
2g	2	10 mg	1
1g	1	5 mg	1
		2 mg	2
		1 mg	1

The weights of 50 mg and under are made of aluminium.

PHOSPHORUS, RED AMORPHOUS

Specification: Purity — 98% Minimum.

Description: Reddish-brown amorphous powder, odourless, non-poisonous. Soluble in absolute alcohol; insoluble in carbon bisulphide.

Uses: Match industry, organic synthesis.

Packing: In tins of 5 kilos nett, 10 tins to a wooden case.
Fire hazard: Dangerous.

赤 磷

規 格: 純度:最低98%
性 狀: 紅棕色非晶性粉狀,無臭,無毒。
用 途: 火柴製造,有機物合成。
包 裝: 五公斤淨重聽裝,十聽裝一木箱。
注意火災。

CALCIUM CARBIDE

Specification: Acetylene yield not less than 250 litres per kilo of CaC_2 .
Size: (1) 15×25 MM. (2) 25×50 MM. (3) 50×80 MM.

Description: Greyish black, irregular solid lumps, reduced to powder after afflorescence. It decomposes water to form acetylene.

Uses: For manufacturing acetylene, calcium cyanamid, lamp black, intermediates; reducing agent; welding agent; smelting ores; steel hardner; signal lights; general illuminating purposes; dehydrating agent of desiccated foods.

Packing: In 100 or 200 kilos water-tight steel drums.
Keep in dry store.

炭 化 鈣 (電石)

規 格: 每公斤炭化鈣可產生乙炔氣最低250公升
尺碼: (1) 15×25 公厘 (2) 25×50 公厘 (3) 50×80 公厘。
說 明: 灰黑色不規則塊狀,經風化後即成爲粉狀,遇水分解化爲乙炔氣。
用 途: 製造乙炔氣,氮氣化鈣,油煙,中間體,還原劑,熔接劑,冶煉礦產金屬,硬鋼劑,信號燈,普通照明用,製乾食品用之消水劑。
包 裝: 100或200公斤壓密鐵桶包裝。
應在乾燥處存儲。

ZINC SULPHATE

ZINC CHLORIDE

ZINC SULPHATE

Specification: $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ content — 98% Minimum.
Description: Colourless, efflorescent crystal; Soluble in water and Glycerine; insoluble in alcohol.
Uses: Manufacture of Zinc salts, drying oils, varnishes, lacquers, ceramics, enamels, lithopone, Zinc white; mordant in dyeing and printing textiles; fireproofing textiles; as paint pigment; clarifying glue solutions; preservative in glues, adhesives, also for wood and hides; water disinfectant; Zinc plating; black nickel plating; in medicine.
Packing: In cloth bags of 25 or 30 kilos nett.

硫 酸 鋅

規格: $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ 含量: 最低 98%
性 狀: 無色結晶, 易於風化, 能溶於水與甘油, 不溶於醇
用 途: 製造鋅鹽, 催乾油, 油漆, 陶瓷器, 搪瓷, 立德粉, 鋅白, 印帶用媒染劑, 防火纖維, 油漆用顏料, 骨膠洗滌及保存劑, 木料皮革保存劑, 淨水消毒劑, 鍍鋅鍍銀用, 醫藥。
包 裝: 布袋裝, 每袋淨重廿五磅或公斤。

ZINC CHLORIDE

Specification: ZnCl_2 content — 98% Minimum.
Description: White granules; Soluble in water, alcohol, glycerine and ether.
Uses: Manufacture of dyestuffs, organic and inorganic chemicals, intermediates, auramine, malachite green, methylene blue, rayon, tinning flux, soldering fluids, vulcanized paper and paper-board, parchmentized paper, fireproofing compositions for wood and textiles, metal burnishing and polishing compositions, cold water glues and adhesive preparations; Electric batteries; as laboratory reagent; mordant in dyeing and printing fabrics; carbonizing agent in treating wool; resist in dyeing and printing textiles; sizing and weighing silks and other textiles; chemical catalyst; wood preservatives; general disinfectant and preservative; paint pigments; purifying petroleum and petroleum distillates; vulcanizing rubber; coating metals; etching glass.
Packing: In square iron drums of 25 kilos nett.

氯 化 鋅

規格: ZnCl_2 含量: 最低 98%
性 狀: 白色粒狀, 能溶於水、醇、甘油及醚
用 途: 製造染料, 有機及無機化學品, 中間體, 橙黃、品藍、銲接用熔劑, 牛皮紙、紙板, 木料及纖維防火劑, 金屬磨光劑, 冷水膠、蓄電池, 化學試驗室試劑, 印帶媒染劑, 整理羊毛用硬化劑, 漆及其他纖維之增重劑及防光劑, 木料之保存, 消毒劑、防腐劑, 油漆用顏料, 火油之精製及過濾, 橡膠硫化, 玻璃蝕劑。
包 裝: 方鐵桶裝每桶淨重廿五公斤。

TRISODIUM PHOSPHATE

SODIUM BICARBONATE

TRISODIUM PHOSPHATE (SODIUM PHOSPHATE, TRI-BASIC)

Specification: $\text{Na}_3\text{PO}_4 \cdot 12\text{H}_2\text{O}$ content — 98% Minimum.
Description: Colourless crystals; Soluble in water.
Uses: Water softener; boiler compounds; water softening and soap substitute in laundry industry; Tanning industry; Sugar purification; Photographic developers; in medicine.
Packing: In cloth bags of 25 kilos nett lined with 3-ply kraft paper.

磷酸三鈉

規格: $\text{Na}_3\text{PO}_4 \cdot 12\text{H}_2\text{O}$ 含量最低 98%
性狀: 無色結晶，能溶於水。
用途: 軟水劑，鍋爐用劑，洗衣用軟水劑及肥皂代用品，雜草，蔗糖精製劑，照像顯影劑，醫藥。
包裝: 布袋內襯三層紙裏，每袋淨重廿五公斤。

SODIUM NITRITE

Specification: NaNO_2 content — 98% up (Dry Base).
Description: Slightly yellowish or white crystals, sticks or powder. Oxidizes on exposure to air. Soluble in water; Slightly soluble in alcohol and ether.
Uses: Dyestuffs manufacture; for diazotising; organic synthesis; preparation of Nitric Oxide; Reagent in Analytical chemistry; Pharmaceuticals; Photographic reagent; Pickling meat.
Packing: In 5-ply kraft paper bags of 50 kilos nett.
 Fire hazard: Dangerous.

亞硝酸鈉

規格: NaNO_2 含量最低 98% (乾基計)
性狀: 淡黃或白色結晶粉或針狀，露置空氣中即行氧化，能溶於水，微溶於醇及醚。
用途: 染料製造(重氮化用)，有機物合成，氯化氫之製造，分析化學用試劑，醫藥製造，照像用試劑，肉類浸漬劑。
包裝: 五層牛皮紙袋裏，每袋淨重五十公斤。
 注意防火。

CHROMIC ACID

PHOSPHORIC ACID

CHROMIC ACID (CHROMIC ANHYDRIDE, CHROMIUM TRIOXIDE)

Specification: CrO_3 content — 98% Minimum.
Description: Reddish brown crystal, soluble in water and ether.
Uses: For manufacturing chromates, chrome dyestuffs, electric batteries, coloured glass, printing and lithographic inks; as mordant in dyeing and printing textiles.
Packing: In steel drums of 200 kilos nett.

鉻 酸

規格: CrO_3 含量最低 98%
性狀: 紅棕色結晶，能溶於水及醚。
用途: 製造各種鉻酸化學品，媒介染料，電池，色玻璃，印刷及石印油墨，織物媒染劑。
包裝: 鐵桶裝，每桶淨重二百公斤。

PHOSPHORIC ACID (ORTHO-PHOSPHORIC ACID)

Specification: H_3PO_4 content — 70% Minimum.
Description: Colourless syrup liquid. Soluble in water.
Uses: For manufacturing phosphates, hydrogen peroxide, glycerophosphates, pharmaceuticals, dyes, incandescent light filaments, pyrotechnics, fertilizers; essences, soft drinks and mineral waters; pickling and rustproofing agent; sugar defecant and clarifier; mordant in dyeing and printing textiles; brightener of silks.
Packing: In glass jar of 30 kilos nett covered with wooden case.

磷 酸

規格: 含 H_3PO_4 最低 70%
性狀: 無色糖漿狀液體，能溶於水。
用途: 製造磷酸鹽化學品，過氧化氫，甘油磷酸，醫藥，染料，電燈泡燈絲，烟火，肥料，香水，硬水軟化劑，礦水，酸漬及防銹劑，並用於製糖作澄清用，紡織品印花之定色及終光增強劑。
包裝: 玻璃罐裝，每罐淨重三十公斤，外加木箱。

SODIUM HYDROXIDE

SODIUM CARBONATE

SODIUM HYDROXIDE (CAUSTIC SODA)

Specification: NaOH content — 98% Minimum.
Description: White, deliquescent crystals; absorbs water and carbon dioxide from the air.
Uses: Petroleum and vegetable oil refining; tanning; soap industry; textile industry; rayon; paper industry; organic synthesis; sodium salts; manufacture of reclaimed rubber.
Packing: In iron drums of 200 kilos nett.
 Tightly sealed and keep dry and away from acids.

氫氧化鈉 (苛性鈉, 燒鹼)

規格: NaOH 含量: 最低98%
性狀: 白色潮解性之結晶, 能自空氣中吸收二氧化碳及水分。
用途: 石油及植物油之精製, 鞣革, 肥皂工業, 纖維工業, 人造絲, 製紙工業, 有機合成, 鈉鹽, 橡膠再製品之製造。
包裝: 鐵桶裝, 每桶淨重二百公斤。
 應嚴密包裝, 互裝乾燥處, 與酸隔離。

SODIUM CARBONATE (SODA ASH)

Specification: Na_2CO_3 content — 98% Minimum.
Description: Greyish-white powder; soluble in water; insoluble in alcohol.
Uses: Manufacture of pure sodium carbonate and bicarbonate, drugs, dyes, glass, soap, paper, caustic soda, paints, leather, enamel-ware and cleansers; dyeing textiles; water softening; refining oils; wood preservation; metallurgy; laundering, etc.
Packing: In gunny bags of 80 kilos nett.

碳酸鈉 (純鹼)

規格: Na_2CO_3 含量: 最低98%
性狀: 灰白色粉狀, 能溶於水, 不溶於醇。
用途: 製造純碳酸鈉及重碳酸鈉, 藥品, 染料, 玻璃, 肥皂, 紙, 苛性鈉, 油漆, 皮革, 搪瓷, 除垢劑, 織物染色, 水之軟化, 油之精製, 木料保存劑, 冶金, 洗衣等用。

CARBOLIC ACID (PHENOL)

CRESYLIC ACID

CARBOLIC ACID (PHENOL)

Specification: C_6H_5OH content—98% Minimum.
Freezing Point: $39^{\circ}-41^{\circ}C$

Description: White crystalline masses absorbing moisture from the air; distinctive odour; strong corrosive, poisonous. Soluble in alcohol, water, ether, chloroform, glycerine, carbon bisulphide, petroleum.

Uses: Disinfectant for sanitary, medical and surgical purposes; manufacture of picric acid, salicylic acid, phenacetin and various intermediates for the production of dyes; paint and varnish removers; synthetic resins and plastics; phenates; brewing (cleansing agent); synthesis of artificial tannins; synthetic perfumes; pharmaceuticals.

Packing: In galvanized iron drums of 210 kilos nett.

石炭酸 (酚)

規格: C_6H_5OH 含量: 最低98%, 冰點: $39^{\circ}-41^{\circ}C$

性質: 白色結晶塊, 受光線作用, 即變為淡紅, 或變為紅色, 能自空氣中吸收水分而自行液化, 味灼, 有特殊臭, 腐蝕力極強, 有毒, 其稀薄水溶液微有甜味。能溶於醚、水、鹽、氯仿、甘油、二硫化碳及石油。

用途: 製造消毒劑、醫藥、芳味酸、水楊酸、非那普丁及各種染料中間體, 油漆除漆劑, 人造樹脂及塑膠, 釀造, 炸藥, 人造鞣酸, 香料, 藥皂。

包裝: 鍍錫鐵桶裝, 每桶淨重二百五十公斤。
包裝嚴密, 須存於藥品處。

CRESYLIC ACID

Specification: $CH_3C_6H_4OH$
Specific Gravity: 1.03-1.06 ($20^{\circ}C$)
Distillation Test: $0^{\circ}-190^{\circ}C$ 5% Maximum.
 $190^{\circ}-205^{\circ}C$ 85% Minimum.

Description: Straw to brown-red coloured liquid, phenolic odour.

Uses: Soluble in water, ammonia, glycerine, caustic soda, petroleum, alcohol. Manufacture of cresols, disinfectants, sheep dips, flotation, synthetic resins; lubricating oils; in medicine.

Packing: In iron drums of 200 kilos nett.

克利沙酸

規格: $CH_3C_6H_4OH$
比重: 1.03—1.06 ($20^{\circ}C$)
集縮試驗: $0^{\circ}-190^{\circ}C$ 最高5%
 $190^{\circ}-205^{\circ}C$ 最低85%

性質: 草黃至紅棕色之液體, 有酚臭。

用途: 能溶於水、阿其尼亞、甘油、燒碱液、石油、酒精。

包裝: 製造甲生酚、消毒劑、洗車用殺寄生蟲之浸液, 合成松香, 滑潤油。
鐵桶裝, 每桶淨重二百公斤。

Specification: $C_5H_4O \cdot CHO$ content — 98% Minimum.

Specific Gravity: 1.157-1.159 20°C.

(Reference — 1.160-1.161)

Distillation Range: 148°C 1.5% Maximum.

170°C 98% Minimum.

Description: Colourless liquid, turning to dark amber upon exposure. Characteristic penetrating odour. Soluble in alcohol, ether and benzene.

Uses: Solvent — purification of mineral oils, wood resin, anthracene; synthetic resins, textile industry, shoe dyes, paint and varnish remover, varnish gums, lacquer formulation. Biological — fungicides, bactericides, preservatives, tree wound dressing, fly repellents. Aldehyde — resins, tanning, manufacture of furan compounds, flotation agents.

性 狀: 無色液體，露置空氣及光中，即變紅棕色，有強烈之嗅氣，能溶於醇，醚及苯。

用 途: 溶劑—石油，松香，及萘之精製；人造松香，纖維工業，鞋油，油漆工業。生物—殺菌劑，殺菌劑，保存劑，樹傷塗劑，驅蟲藥。

包 裝: 鐵桶裝，每桶淨重二百廿公斤。

ANILINE OIL

Specification: $C_6H_5NH_2$ content — 99% Minimum (Dry base)

Description: Colourless oily liquid; rapidly becomes brown on exposure to air and light; Soluble in alcohol and ether; slightly soluble in water.

Uses: Dyes; Intermediates; Chemicals; dyeing and calico printing; vulcanization accelerator; germicide; Paint and varnish; perfumery; Pharmaceuticals.

Packing: In iron drums of 200 kilos nett.

苯 胺

規格: $C_6H_5NH_2$ 含量最低 99% (乾基計)

性 狀: 無色油狀液體，如露置於空氣中及日光下迅即變為棕色，能溶於醇與醚，微溶於水，有毒。

用 途: 染料，中間體，化學藥品，印染，橡膠硫化促進劑，殺菌劑，油漆，香料，藥劑。

包 裝: 鐵桶裝，每桶淨重二百廿公斤。

PARAFFIN WAX

STEARIC ACID

PARAFFIN WAX

Specification: White and Yellow. Melting Point: 129°—136°F.
Description: White and Yellow translucent, waxy, tasteless, odourless solid. Soluble in benzene, benzene, warm alcohol, chloroform, turpentine, carbon bisulphide and olive oil; insoluble in acids.
Uses: Manufacture of paraffin candles, waxed paper, etc.; waterproofing wood, cord, etc.; impregnating matches; lubricants; preserving eggs; oil crayons; pharmacy (to stiffen ointments); surgery; stoppers for acid bottles; preservative covers for food products; electrical insulation; phonograph records; floor polishes; extraction of perfumes from flowers; cosmetics; photography; anti-frothing agent in sugar refining; coating interior of wine casks;
Packing: In carton of 25 kilos nett.

石 腊

規格: 白黃二種 熔點: 129°—136°F.
性狀: 白色半透明之腊狀固體, 無嗅無味, 能溶於石油精, 苯, 溫酒精, 氯仿, 松節油, 二硫化碳及橄欖油, 不溶於酸。
用途: 腊燭腊紙等製造, 防水木木條製造, 大藥被浸漬劑, 滑潤劑, 雞蛋保存劑, 腊筆, 醫藥製劑(油膏增稠劑), 外科醫用, 威酸瓶子塞, 食品保存, 電流絕緣, 留聲機盤, 地板腊, 香料浸出劑, 化粧品, 照像, 製糖工業用泡沫制止劑, 酒桶襯裏。
包裝: 25公斤淨重紙箱裝。

STEARIC ACID

Specification: $\text{CH}_3(\text{CH}_2)_{16}\text{COOH}$ Freezing point: 52°C. Minimum
Description: Colourless, odourless, wax-like material. Soluble in ether, alcohol, carbon bisulphide, carbon tetrachloride, chloroform; slightly soluble in water.
Uses: Manufacture of stearates, cosmetics, soaps, pyrotechnic compositions, candles, shoe and metal polishes; medicine.
Packing: In wooden cases of 40 kilos nett lined with kraft paper.

硬 脂 酸

規格: $\text{CH}_3(\text{CH}_2)_{16}\text{COOH}$ 凝固點: 最低52°C
性狀: 白色無嗅如腊狀之物質, 能溶於醚, 醇, 二硫化碳, 四氯化碳, 氯仿; 微溶於水。
用途: 製造硬脂酸鹽, 化粧品, 肥皂, 烟火, 腊燭, 鞋油, 金屬磨光劑, 醫藥。
包裝: 襯牛皮紙裏之木箱裝, 每箱淨重四十公斤。

INAPHTHALENE, REFINED ETHYL ALCOHOL

NAPHTHALENE, REFINED

Specification: $C_{10}H_8$ Melting point not lower than $79^{\circ}C$.
Description: White, crystalline, volatile flakes, strong coal-tar odour; soluble in benzene, absolute alcohol and ether; insoluble in water.
Uses: Manufacture of chemicals, dyes, intermediates, moth repellent, insecticide; constituent of composite motor fuels; disinfectant; celluloid; solvent for resins; manufacture of synthetic resins by condensation with formaldehyde; paraffin substitute; synthetic tannins; preserving hides; wood preservative compounds; lubricating compounds; asphalt solvent.
Packing: In 5-ply kraft paper bags of 25 or 30 kilos nett.

精 萘

規格: $C_{10}H_8$ 熔點不低於 $79^{\circ}C$
性質: 具揮發性之白色結晶片，有煤焦油臭，能溶於苯，醚及無水酒精，不溶於水。
用途: 化學品，染料，中間體，驅蟲劑，殺蟲劑，發動機燃料油，煙藥，消毒劑，寒膠等之製造，松香溶劑，合成松香，石臘代用品，皮光之保存，木料保存劑，潤滑劑，潤滑劑，合成單寧酸。
包裝: 五層牛皮紙袋裝，每袋淨重廿五或卅公斤。

ETHYL ALCOHOL

Specification: C_2H_5OH content — 96% Minimum.
Description: Colourless, volatile liquid; ethereal, vinous odour, pungent taste. Soluble in water, methyl alcohol and ether.
Uses: Manufacture of intermediates, esters, organic derivatives, synthetic drugs, chloroform, iodoform, ether, acetic acid, phenacetin, antipyrine, dyes, smokeless powder, food preparations, sheep dips, plant washes, motor fuel, anti-freeze solutions, carbon removers, cleansers, polishing compositions, spirit varnishes, enamels, paint removers, cosmetics, disinfecting soaps, liquid and transparent plastics; refining petroleum, dyeing and printing; silvering mirrors; in medicine.
Packing: In iron drums.
Fire hazard: Dangerous.

PEPSIN

Quality: B.P. 1953. 1:2500, 1:3000
Description: Pepsin occurs as a white or light buff-coloured amorphous powder. It has a faint meat-like odour and a slight acid or saline taste. It readily absorbs moisture on exposure to air and is soluble in water but insoluble in alcohol and ether. The activity of Pepsin is destroyed by boiling in water over 70°C or by heating in slightly alkaline solution. It should be kept in a well-closed container, and stored in a cool place.
Uses: It is used for increasing the digestive power of gastric juice.
Packing: In bottles of one lb. nett, 28 bottles to a wooden case.

胃蛋白酶

品質: 符合B.P. 1953 規格 1:2500, 1:3000
性狀: 本品為淡黃色無晶形粉狀，略具肉香，微帶酸或鹹味，露置空氣中極易吸收水分，能溶於水，但不能溶於酒精及醚。本品如僅水處，超過攝氏表70度時，或在稍具鹼性之溶液內加熱則即失其功效，包裝應嚴密，並存放於涼處。
用途: 用以增加胃液之消化力。
包裝: 一磅瓶裝，每箱裝28瓶。

PANCREATIN

Quality: B.P. 1953. 1:25
Description: Pancreatin is prepared from fresh pancreas of animals employed for food. It is a colourless or buff-coloured amorphous powder with meaty odour, soluble in water, insoluble in alcohol and ether. It should be kept in well-closed container and stored in a cool place.
Uses: It is a mixture of enzymes, trypsin, lipase and amylase and therefore has the power to digest starch, proteins and fats.
Packing: In one lb. bottles, 28 bottles to a wooden case.

胰 酶

品質: 符合B.P. 1953 規格 1:25
性狀: 本品係由食用畜類之新鮮胰所製成，無色或黃色無晶形粉狀，嗅有肉味，能溶於水，不溶於酒精及醚，包裝應嚴密，放置涼處。
用途: 本品因係多種酵素之混合物故有消化澱粉，蛋白質及脂肪之功能。
包裝: 一磅瓶裝，廿八瓶裝一木箱

SOLUTION OF CRESOL WITH SOAP (LYSOL)

Specification: B.P. 1953.
Description: Amber to reddish-brown liquid with phenol-like odour; Soluble in water, ether and alcohol; a mixture of isomeric cresols obtained from coal tar.
Uses: Highly effective as germicide, stronger than phenol, extensively used as disinfectant.
Packing: In tins of one gallon (10 pounds) nett.

煤酚皂溶液 (來蘇爾)

規格: 符合1953年英國藥典
性狀: 本品為黃棕色之液體，味似石炭酸，能溶於水、醚及醇中，又稱複方煤油
用途: 具有強大的殺菌效能，效力大於石炭酸，可供防疫殺菌之用
包裝: 一加侖裝 (淨重10磅)

DIASTASE

Specification: Digestive power of starch 1:100.
Description: Diastase occurs as a yellowish-white powder. It is almost entirely soluble in water, but forming a turbid solution, and insoluble in alcohol.
Uses: Diastase is a starch saccharifying enzyme obtained from vegetables and therefore increases the digestive power of the stomach against starch, protein etc. It is extremely effective in the treatment of certain stomach troubles.
Packing: In glass bottles of 1 lb. nett, 28 bottles to a wooden case.

澱粉酶

規格: 澱粉消化力 1:100
性狀: 本品為淡黃白色，無晶形之粉末，能在水中溶解成混濁之溶液但不溶於酒精。
用途: 本品為轉化澱粉成糖之酵素，對澱粉蛋白等能增加消化能力，對於治療胃病最
包裝: 一磅淨重紙裝，每一木箱裝28瓶。

不溶於酒精。

性質: 白色細結晶粉狀，無嗅有毒。

用途: 製造硫酸鋇，細鹽，立德粉，色基，煙火，油漆，殺菌劑，照相化學品，毒鼠藥，顏料，油漆，等等。並用於製革及皮革之整理，印染紡織品之定色，糖之精製，軟水劑之製造等。

包裝: 木箱內襯牛皮紙及防濕紙，每箱淨重50公斤，應儲存於乾燥處。

CALCIUM CHLORIDE, TECH.

Specification: $\text{CaCl}_2 \cdot \text{H}_2\text{O}$ Content 70% Minimum.

Description: White crystalline lumps, odourless, slightly bitter taste, soluble in water, insoluble in ether.

Uses: For manufacturing tartaric acid, ammonium chloride, precipitated chalk, intermediate and organic chemicals, mineral water, fire proof paint; drying agent for gases; food preserve; dehydrating petroleum; preserving wood; dust-layer for road; fire protection; drying fruits and vegetables before canning.

Packing: In iron drums of 100 kilos nett.

友好牌直接染料類

通 性: 粉狀，易溶於水。
用 途: 直接染棉、麻等植物纖維，某些產品並可用於動物纖維之染色。
包 裝: 60 公斤鐵桶裝。
注意事項: 防火、防潮，搬運時輕取輕放，勿使桶皮摔破。

染法說明: 將已稱準之染料用少許熱水調成漿狀，再用相當於染料 10—15 倍之熱水沖之沸煮片刻，充分攪拌至完全溶解，直接染料在第一次染完後染液不能完全清湯，特別對於染深色時利用舊染液繼續使用較為經濟，繼續染色時所加入之染料一般約為第一次所用量之 1/4，元明粉及純鹼用量視第一次染完耗用量而定。染色所用水量比為染物之 1:15—1:20
 染時加 0.5—2% 純鹼，5—30% 元明粉，(或雙倍之芒硝)染物須先去漿精煉，洗淨後進行染色，染物於 40°—50°C 時浸入慢慢增加溫度至沸，共染 30—60 分鐘取出用清水洗後絞出陰乾。

以上品種耐光耐洗堅牢度較一般染料為佳；如需更佳之堅牢度可用以下之“染後處理辦法”：

(甲) 1—3% 硫酸銅 1—2% 冰醋酸

(乙) 1—2% 硫酸銅 1—2% 紅礬鉀 1—2% 冰醋酸

用直接染法染完後，可將染過之染物浸入 20—30 倍含有 (甲) 或 (乙) 液中之溫度 70—80°C 時處理 20 分鐘後洗淨。

友好牌酸性染料類

通性: 粉狀，易溶於水。
用途: 於酸性浴直接染絲、毛等動物纖維，並可用於染紙及刷紙。
包裝: 60 公斤鐵桶裝。
注意事項: 防火、防潮、搬運時輕取輕放，勿使桶皮摔破。

染法說明: 先將染料充分溶解，傾入染缸內，染缸內之水量為染物的 30 倍；加入元明粉 10% 及醋酸 2%，於 50°C 時加入染物，慢慢升高溫度至沸，沸染 20—30 分鐘，再加入 1—4% 硫酸，繼續沸煮 20—50 分鐘，如色液不清，可降低溫度，靜置 20—30 分鐘，待色吸淨後取出洗淨絞乾。

友好牌鹽基染料類

通性: 結晶體或粉狀，易溶於水(不含鐵質)，酒精或醋酸。
用途: 可用於動物纖維，植物纖維，但對於棉纖維無親合力，須用媒染劑處理後方可上染，又可用於染紙刷紙，色澱的製造，及植物鞣皮革的染色。
包裝: 60 公斤鐵桶裝。
注意事項: 防火、防潮、搬運時輕取輕放，勿使桶皮摔破。

染法說明: (1) 棉線在染前處理方法：以煮透之棉線，根據染色的深淺於 60—90°C 的溫度浸入 2—6% 的單寧酸液內，不再加溫，翻動半小時，放置 3—6 小時或隔夜取出，勿洗淨，再用吐酒石 1—3% 溶液(即單寧酸的一半)冷處理之，半小時後，將線的水分絞乾留待染色。
 (注意：處理時忌用鐵器)

(2) 染色方法：將秤準之染料用少量 1/1000 的稀醋酸調成漿狀，用沸水沖開，將染液之半量，傾入染浴，(忌用鐵器)。浴比為 1:50，於 30—40°C 將染物浸入染 10 分鐘，再將另一半染液加入逐漸升溫至 60—70°C 再染 10 分鐘，加 2—3% 醋酸繼續染 20 分鐘，絞出洗淨陰乾。

友好牌硫化染料類

通性: 粉末，不溶於水，易溶於硫化碱液內，易吸收水份。
用途: 可以染棉及其織物。
包裝: 60 公斤鐵桶裝。
注意事項: 防火、防潮，搬運時輕取輕放，勿使桶皮摔破。

染法說明: **染料溶化:** 此染料易溶於濃硫化碱及純碱之溶液中，先將硫化碱與純碱溶於 10—20 倍沸水中然後將染料加入，同時攪拌直至染料完全溶解，必要時可以沸煮片刻，但沸煮時間不可過長。
硫化碱: 佔所用染料之 2—2.5 倍（硫化碱純度是 50 % 的）如染淺色可按 3—3.5 倍使用。
純碱: 2—4 % 按染物計算使用。
元明粉或食鹽: 5—30 % 按染物計算，（如元明粉是含水結晶的，用量加倍）如在機器中染色，食鹽可以代替元明粉，用量與元明粉同。
土耳其紅油: 0.5—1 份按染液每千份計算可以使色澤更加鮮艷，並可得均勻染色結果。
小蘇打: 1—4 % 按染物計算，可使染液還原力提高，更可使染物鮮艷均勻。

染物與染液比例: 線染 1:15—20
 捲染 1: 5
 軋染 1: 4—20

染色溫度: 60—65°C

染色時間: 30—60 分鐘

洗 滌: 染色完畢後用冷水洗二三次至水澄清再用 60—70°C 溫水洗一次，最後用清水洗一次。

染後處理: 染物當在染完後即浸入含 2—3 % 紅礬鉀及 1.5—2 % 冰醋酸之水溶液中，在溫度的 60—65°C 中 20 分鐘，可以促進氧化並防止氧化後變色之弊。

皂 煮: 於每千份水中加純碱 2 份肥皂 10 份，沸煮 10—15 分鐘，然後用冷水洗 2—3 次，色澤尤為鮮艷。

DIRECT DYESTUFFS

"Friendship" brand, made in Tientsin, China.

Properties: Powder, easily soluble in water.

Uses: Direct dyeing of cotton, linen, and other vegetable fibers; some of them can also be used for dyeing animal fibers.

Packing: Iron drums of 60 kilos net.

Caution: Store away from fire and moisture, and avoid rough handling.

DIRECTIONS FOR DYEING

The required quantity of dyestuff is weighed and mixed with some hot water to become pasty. Pour 10 to 15 times as much hot water as the dye over the pasty mass which dissolves completely after a short boiling and thorough stirring. The solution is then poured through a fine-meshed sieve or cloth into the bath. Direct dyestuffs are not completely exhausted from the dye-liquor at the first dyeing and it is therefore economical to use the old dyebath again especially for dyeing fuller shades. The addition of dyestuff into every subsequent bath usually amounts to 2/3—3/4 of the original quantity of the dyestuff used in preparing the first bath. Salt and soda are added to the old bath only in such quantities as are necessary to make up for their loss caused during the preceding dyeing process.

All dyeings in the first bath are prepared in the ratio 1:15 to 1:20.

The following additions are usually required:

Soda ash	0.5—2%
Anhydrous Glauber's salt	5—30% (or double the quantity of Glauber's salt crystals).

The materials are to be preliminarily boiled and desized before dyeing.

Dyeing is started at a temperature of 40—50°C, which is gradually increased till the temperature of the dyebath is near the boiling point, and the material is dyed at this temperature for 30—60 minutes. Then, the dyed material is rinsed in several changes of cold water, and finally dried.

After-treatment: The following dyes possess higher rating of fastness to light and to washing than those of ordinary direct dyestuffs; yet they can be further improved by the following process:—

The material dyed by the usual method for direct dyes can be after-treated with a bath of 20—30 times the weight of material, containing either:

(a)	Copper sulphate	1—3%
	Acetic acid, glacial	1—2%
	or:	
(b)	Copper sulphate	1—2%
	Potassium bichromate	1—2%
	Acetic acid, glacial	1—2%

for about 20 minutes at a temperature of 70—80°C., and then rinsed in water.

Direct Copper Blue BB and Direct Blue RW and Direct Diazo Black BH are suitable for after-treatment.

ACID DYESTUFFS

"Friendship" brand, made in Tientsin, China.

Properties: Powder, easily soluble in water.

Uses: Direct dyeing of silk, wool, and other animal fibers from an acid bath, and also for dyeing and brushing on paper.

Packing: Iron drums of 60 kilos net.

Caution: Store away from fire and moisture, and avoid rough handling.

DIRECTIONS FOR DYEING

Pour the dissolved dye into the bath, containing water 30 times the weight of the material. 10% Glauber's salt and 2% of acetic acid are then added.

The material to be dyed is immersed in the dyebath at a temperature of 50°C. which is gradually increased to the boiling point, and the material is boiled for 20—30 minutes. Then add 1—4% of sulphuric acid and continue boiling for another 20—30 minutes. If the dyebath is not completely exhausted, the bath is then allowed to cool down, and let the material remain in the bath 20—30 minutes longer, otherwise, the material is removed, rinsed thoroughly and finally dried.

BASIC DYESTUFFS

"Friendship" brand, made in Tientsin, China.

Properties: Crystals or powder; easily soluble in water (without iron traces), also alcohol and acetic acid.

Uses: Dyeing of animal and vegetable fibers, but cotton fibers should be mordanted before dyeing. It can be used for paper brushing and dyeing, production of lake, and dyeing of vegetable tanned leather.

Packing: Iron drums of 60 kilos net.

Caution: Store away from fire and moisture, and avoid rough handling.

DIRECTIONS FOR DYEING

- Mordanting process for cotton yarn:** Enter previously boiled cotton yarn, into the bath containing 2—6% of tannic acid at 80—90°C. according to the desired depth of shade (Liquor ratio 1:20). Turn for 30 minutes and allow the temperature to cool down. After 3—6 hours or over-night, remove the yarn without washing, wring out evenly and immediately immerse into a cold solution of 1—3% tarter emetic (half the quantity of tannic acid). After 30 minutes, rinse well. (Iron vessels should not be used).
- Dyeing method:** Paste the dyestuff with a little dilute acetic acid, and then dissolve in boiling water. Pour in half of the solution into the bath containing water sufficient for a liquor ratio of 1:30. Enter the yarn at 30—40°C. and dye for 10 minutes. Then add the remaining half of the solution, increase the temperature gradually to 60—70°C., dye for another 10 minutes, add 2—3% acetic acid and finally dye for 20 minutes.

Remove the yarn, rinse one or two times with cold water and leave it dry slowly in a dark place.

ACID CHROME DYESTUFFS

"Friendship" brand, made in Tientsin, China.

Properties: Powder, easily soluble in water.

Uses: Dyeing of wool, silk and other animal fibers from an acid bath after chrome-mordanting.

Packing: Iron drums of 60 kilos net.

Caution: Store away from fire and moisture, and avoid rough handling.

DIRECTIONS FOR DYEING

Pour the dissolved dye into the bath, containing water 40 times the weight of the material. 10—20% Glauber's salt and 1—2% acetic acid are then added.

The material to be dyed is immersed in the dyebath at a temperature of 40—50°C, which is gradually increased to the boiling point. Boil for 1/2 hour, add 1—2% of sulphuric acid and continue boiling for another 1/2 hour. Allow the temperature to cool down to 60°C, add 0.5—3% of potassium bichromate and keep boiling for 30 minutes. The material is well rinsed and finally dried.

SULPHUR DYESTUFFS

"Friendship" brand, made in Tientsin, China.

Properties: Powder, insoluble in water; easily soluble in sodium sulfide solution, absorb moisture.

Uses: Dyeing of cotton and cotton fabrics.

Packing: Iron drums of 60 kilos net.

Caution: Store away from fire and moisture, and avoid rough handling.

DIRECTIONS FOR DYEING

Dissolving the dye: Sulphur dyes dissolve most readily and completely in a concentrated solution of sodium sulfide and soda ash. Dissolve the sodium sulfide and soda ash in 10 to 20 times their weight of boiling water, add the dye, and stir until solution is complete, boiling if necessary. Prolonged boiling should be avoided.

Sodium Sulfide: The proportion of sodium sulfide (50% purity) used is from 2 to 2.5 times the weight of dye. Light shade requires 3 to 3.5 times the weight of dye.

Soda Ash: 2 to 4% of the weight of the material is used.

Anhydrous Glauber's salt or common salt: 5 to 30% of the weight of the material is used (or double the quantity of Glauber's salt crystals). For machine dyeing, anhydrous Glauber's salt may be replaced by equal quantity of common salt.

Turkey Red Oil: Add 0.05 to 0.1% of the volume of the dyebath for improving the shade.

Sodium Bicarbonate: 1 to 4% of the weight of the material added to the dyebath improves the reducing effect; consequently it produces even dyeing and brilliancy of shade.

Ratio of material to dyebath volume:

Yarn dyeing	1:15 to 1:20
Jig dyeing	1:5
Pad dyeing	1:4 to 1:20

Dyeing temperature: 60—65°C.

Time of dyeing: 30—60 minutes.

Rinsing: When the desired shade has been attained, rinse the dyed material in several changes of cold water until the effluent is clear, following with a rinse in warm water at 60—70°C, and a final rinse in cold water.

After-treatment: After dyeing has been completed, immerse the material in a bath containing:

Potassium bichromate	2—3%
Acetic acid, glacial	1.5—2%

for 20 minutes at 60—65°C., thus accelerating oxidation, and prevent possible change of shade on storing.

Soaping: The dyed material may be treated for 10—15 minutes in a boiling bath containing:

Soap	1% of water
Soda ash	0.2% of water

and then rinsed 2—3 times with cold water. The shade can thus be further improved.

DYE-INTERMEDIATES

"Friendship" brand, made in Tientsin, China.

Alpha-Naphthylamine ($C_{10}H_7NH_2$)

Purity: 98%

Molecular Weight: 143

Constants:	Specific Gravity	1.131
	Boiling Point	301°C.
	Melting Point	50°C.

Color & Properties: Reddish-brown crystals, having a characteristic odor, soluble in hydrochloric acid, alcohol, and ether; slightly soluble in water.

Uses: Production of intermediates, Sitara Fast Red RL, Wool Red B, and other Azo-dyes.

Packing: Iron drums of 100 kilos net.

Caution: Store in cool, dry and airy place.

Beta-Naphthol ($C_{10}H_7OH$)

Purity: 98%

Molecular Weight: 144

Constants:	Specific Gravity	1.2
	Melting Point	120°C.

Color & Properties: Light-yellowish-brown bulky leaflets; soluble in alcohol, ether, chloroform, and alkaline solutions; slightly soluble in hot water.

Uses: Organic syntheses; production of Orange II, Wool Red A, Acid Black F, and other Azo-dyes.

Packing: Iron drums of 60 kilos net.

Caution: Store in cool, dry and airy place.

Sodium Naphthionate ($C_{10}H_6(NH_2)SO_3Na \cdot 4H_2O$)

Purity: 74—75%

Molecular Weight: 317

Color & Properties: Colorless crystals; easily soluble in water.

Uses: Production of Acid Scarlet (Ponceau), Acid Pink, Congo Red, and other Azo-dyes.

Packing: Iron drums of 100 kilos net.

Caution: Store in cool and dry place.

Sulfanilic Acid ($C_6H_4NH_2SO_3H$)

Purity: 95%

Molecular Weight: 173

Color & Properties: Grayish-white powder, soluble in concentrated hydrochloric acid; slightly soluble in water; insoluble in alcohol and ether.

Uses: Production of Orange II, Acid Brown G, Direct Green, and other Azo-dyes.

Packing: Iron drums of 100 kilos net.

Caution: Store in cool, dry and airy place.

Lithopone

Specification: 28 — 30%

Uses: Paint, Printing-ink, Rubber, etc.

Packing: Packed in paper bags of 50 kgs. net. (6 plies including one ply of water-proof packing).

Benzidine Sulfate ($C_{12}H_{12}N_2H_2SO_4$)

Percentage of Base: 25%

Molecular Weight: 282

Color & Properties: Gray paste; non-poisonous.

Uses: Intermediate for direct Azo-dyes.

Packing: Wooden drums of 100 kilos net.

Caution: Store away from fire and boiler, and avoid rough handling.

Neville-Winther's Acid ($HO-C_{10}H_6SO_3H$)

Purity: 65%

Molecular Weight: 224.12

Color & Properties: Pale yellow powder; soluble in water.

Melting Point: 170°C.

Uses: Manufacture for Azo-dyes; Azo Rubine, Double Scarlet S, Cloth Red B, Diamond Black F, Direct Copper Blue BB, Direct Blue R, Benzo Gray S.

Packing: Iron drums of 100 kilos net.

Caution: Store in a dry, cool, air circulating place.

說 明

品 名：矽酸鈉亦名水玻璃。

規 格：如下兩種。

(a) $\text{Na}_2\text{O}:2.4\text{SiO}_2$ 56°Be'

(b) $\text{Na}_2\text{O}:3.3\text{SiO}_2$ 40°Be'

包 裝：舊鐵桶庄。

(a) 項 每桶淨重 320 公斤

(b) 項 每桶淨重 270 公斤

主要用途：

1. 肥皂之填充劑。
2. 紙盒及三夾板之接合劑。
3. 製紙之漂白劑。
4. 可作製造耐酸器材之原料。
5. 棉布，紗布之漂白劑及印染劑。
6. 用于某種礦石之浮選。
7. 雞蛋保藏劑。

DESCRIPTION

Commodity: Sodium Silicate, or Water Glass.

Specifications: Two kinds as follows:-

(a) $\text{Na}_2\text{O}:2.4\text{SiO}_2$ 56°Be'

(b) $\text{Na}_2\text{O}:3.3\text{SiO}_2$ 40°Be'

Packing: In second hand iron drums.

(a) item 320 kilos net weight per drum.

(b) item 270 kilos net weight per drum.

Main Uses:

1. Filler of soap.
2. Adhesive for box and plywood.
3. A bleaching agent and element in paper manufacturing.
4. Material as for manufacturing acid-proof equipment.
5. Bleaching agent and mordant for cotton cloth and yarn.
6. Floatation for certain ore.
7. Preservative for eggs.

中國進出口公司
CHINA NATIONAL IMPORT & EXPORT CORPORATION

THE CHINA NATIONAL IMPORT & EXPORT CORPORATION, first established in 1951, is one of the state-owned foreign trade enterprises of the People's Republic of China. During the past few years, this CORPORATION has maintained and quickly developed extensive business contacts with manufacturers and traders the world over, and has concluded a considerable volume of business on the basis of equality and mutual benefit to the satisfaction of all parties concerned. Up to the present, there are already over four thousand firms in different countries, who have established regular business relations with this CORPORATION.

This CORPORATION has always been an active participant in International Trade Fairs. The actual business transactions entered into between this CORPORATION and other participating parties have enriched the activities of such Trade Fairs, and as a result, have been widely welcome to various circles. It is the sincere desire of this CORPORATION to bring about a still closer relationship with manufacturers and traders in different parts of the world.

The present scope of business of this CORPORATION covers the import and export of such commodities as CHEMICALS, PHARMACEUTICALS, MEDICAL & SURGICAL INSTRUMENTS AND SUPPLIES, FERTILIZERS, DYESTUFFS & PIGMENTS, RUBBER & RUBBER PRODUCTS, PETROLEUM & PETROLEUM PRODUCTS. All business friends abroad are cordially invited to write and/or cable their valued offers and/or enquiries to this CORPORATION, whose addresses and cable addresses for the Head Office and Branch Offices are as follows:

SODA ASH (SODIUM CARBONATE)

(Na_2CO_3)

Specification:	Total alkalinity as Na_2CO_3 98% up.
Characteristics:	Water soluble, white crystalline powder.
Uses and applications:	Raw materials for the manufacture of Caustic Soda and Sodium Silicate; metallurgical works; petroleum industry; oils and fats refinery; glass industry and paper pulp industry.
Packing:	In 80-kg. gunny bags lined with cloth bag.
Precautions:	Keep in dry store and away from dampness and lime.

CAUSTIC SODA (SODIUM HYDROXIDE) (NaOH)

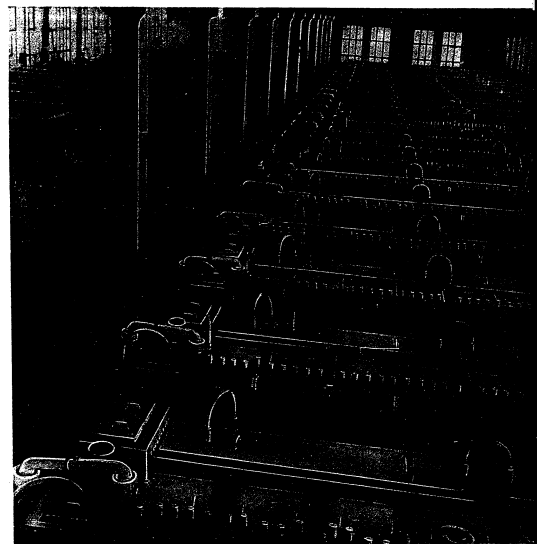

Specification: NaOH content: 96% up or 98% up.

Characteristics: White solid, with slight bluish shade allowed, easily soluble in water, hygroscopic, corrosive, absorbs carbon dioxide when exposed to air.

Uses and applications: Petroleum and oils refining; paper pulp, glass and dye-stuffs industries; rayon yarns, toilet soaps, soaps and cosmetics manufacturing.

Packing: In 200-kg. iron drums.

Precautions: Keep containers tightly closed to avoid deliquescence, and store in dry place to prevent the drum from getting rusty.

SODIUM SULPHIDE

(Na₂S)

Specification:	Na ₂ S content: 60-62% or 62.5-63.5% _{min} solid fused.
Characteristics:	Pinkish or brick-red solid, hygroscopic, soluble in water.
Uses and applications:	Raw material for the manufacture of sulphur dyes; auxiliary for sulphur dyes; paper pulp manufacturing; dehairing hides; cotton fibre detergent; denitrating agent in rayon industry.
Packing:	In 100 or 160-kg. iron drums.
Precautions:	Keep in ventilated and dry place to prevent the drum from getting rusty; stow away from acids; keep container tightly closed and intact to prevent dampness.

CALCIUM CARBIDE

(CaC₂)

Specification:	Acetylene yield not less than 250 litres per kilo of CaC ₂ .
Characteristics:	Greyish black, irregular solid lumps, hygroscopic, reduced to powder after efflorescence, with formation of acetylene gas when wetted by water.
Uses and applications:	For illumination and welding purposes; organic synthesis.
Packing:	In 100/200-kg. drums.
Precautions:	Handle with care to prevent explosion caused by collision, keep in dry store.

HYDROCHLORIC ACID (HCl)

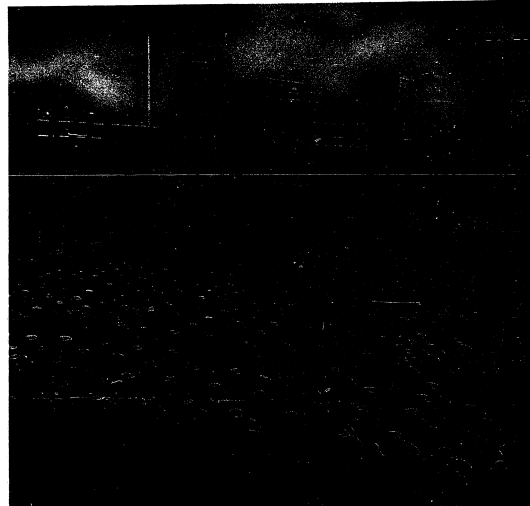

Specification: HCl content: 31% min.

Characteristics: Colorless or yellowish solution, with a strong pungent odour and corrosive property.

Uses and applications: As reagents for synthetic rubber, dye-stuff and food industries; also used in tanning, dyeing, metal stain removing; for manufacturing pharmaceuticals, perfumes and chlorides.

Packing: In 30-kg. acid proof jars.

Precautions: Keep in cool place and avoid collision.

ACTIVATED CHARCOAL

Specification: (1) Absorption power 35% up.
(2) 0.1 gm decolourizes not less than 15 c.c. of 0.1% Methylene Blue solution.

Characteristics: (1) Black granules.
(2) Black powder.

Uses and applications: (1) Pharmaceutical purpose.
(2) Industrial decolourization.

Packing: In 20-kg. iron drums.

Precautions: Keep in tightly closed containers to prevent dampness.

ZINC OXIDE (ZnO)

Specification: ZnO content: 99.5% min.

Characteristics: White powder, insoluble in water, soluble in acid and absorbs carbon dioxide when exposed to air.

Uses and applications: For rubber, paint, pigments, pharmaceutical and match industries.

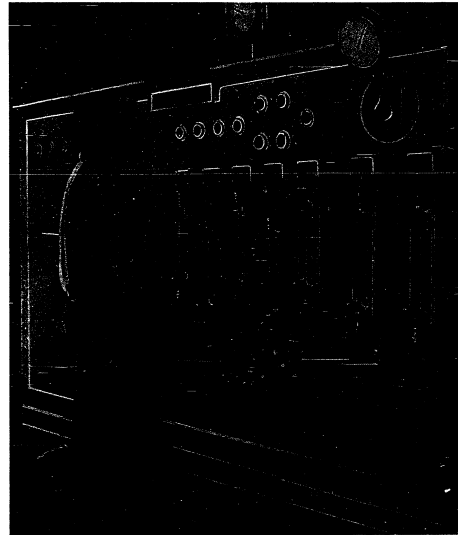

Packing: In 25/50-kg. paper-lined canvas bags.

Precautions: Store in ventilated and dry place.

RED PHOSPHORUS

(P)

Specification:	On request.
Characteristics:	Red or dark-red powder, explosive if heated.
Uses and applications:	Safety match manufacturing.
Packing:	In 10-kg. iron drums.
Precautions:	Store in dry, cool and ventilated place, keep away from fire.

AMMONIUM CHLORIDE (NH₄Cl)

Specification: NH₄Cl content: 99% up

Characteristics: White crystals, sublimes when heated, soluble in water and glycerol.

Uses and applications: Dry batteries manufacturing; textile printing; tanning industries; electric welding; electroplating; nitrogen fertilizers.

Packing: In 50-kg. 5 ply kraft paper bags.

Precautions: Store in dry ventilated place, keep away from alkalies.

SULPHUR BLACK

Specification: Strength (In comparison with the standard sample): 100 ± 5.

Characteristics: Shade: Reddish blue or blue.

Characteristics: Black powder, easily oxidized and absorbs moisture when exposed to air. Dyed material gets brilliant colour and high fastness.

Uses and applications: For dyeing cotton and linen fabrics.

Packing: In 50-kg. iron drums.

Precautions: Keep in tightly closed containers and away from fire and dampness. Handle with care.

SODIUM PHOSPHATE TRIBASIC ($\text{Na}_3\text{PO}_4 \cdot 12\text{H}_2\text{O}$)

Specification: $\text{Na}_3\text{PO}_4 \cdot 12\text{H}_2\text{O}$ content: 98% min.

Characteristics: Colorless crystals or white powder.

Uses and applications: Effective boiler detergent; water softening agent; tanning and sugar refining industries.

Packing: In 25-kg. cloth bags.

Precautions: Keep under appropriate humidity.

PHENOL ($\text{C}_6\text{H}_5\text{OH}$)

Specification: Congeals at $39^\circ - 41^\circ\text{C}$

Characteristics: Colourless to pinkish crystalline mass, soluble in water with distinctive odour and corrosive property.

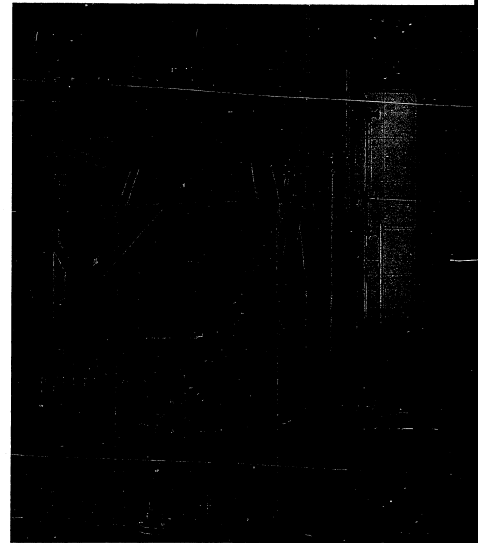

Uses and applications: Dye-intermediates; raw material for phenol-formaldehyde synthetic resin; strong antiseptic and germicide preparations.

Packing: In 210-kg. galvanized iron drums.

Precautions: Do not expose to air or light, avoid contact with skin.

ETHYL ALCOHOL
(C_2H_5OH)

Specification:	Purity: 96% min.
Characteristics:	Colourless liquid, inflammable and easily volatile.
Uses and applications:	Industrial and pharmaceutical purposes.
Packing:	In iron drums.
Precautions:	Keep away from fire.

MONOCHLOROBENZENE (C_6H_5Cl)

Specification:	Benzene content (dry base): 0.3% max. Sp. Gr. D_{15}^{15} 1.112—1.114
Characteristics:	Colourless, transparent liquid with pleasant odour, inflammable, anaesthetic, insoluble in water, but soluble in alcohol, ether and benzene.
Uses and applications:	For manufacturing phenol; picric acid; dichlorobenzene; dinitrochlorobenzene; sulphur black; sulphur brown etc.; raw material for manufacturing insecticides, such as DDT and Benzene-Hexachloride; as solvents.
Packing:	In 220/240 kg. iron drums.
Precautions:	Keep away from open flame and electric spark. Containers should be tightly closed, otherwise an inflammable and explosive mixture may be resulted from its volatile vapour and air. Sand may be used in case of fire.

NITROBENZENE $(C_6H_5NO_2)$

Specification:	Solidifying point (dry base): 4.5°C min.
Characteristics:	Yellowish oily liquid with bitter almond odour, soluble in alcohol, ether and benzene; slightly soluble in water, easily inflammable and poisonous.
Uses and applications:	Manufacture of aniline; benzidine-base; quinoline; azobenzene; dye-stuffs and perfumes.
Packing:	In 200-kg. iron drums.
Precautions:	Keep in cool place, away from inflammable goods, avoid contact with skin, use air-mask and rubber gloves when handling.

DINITROCHLOROBENZENE

Specification:	Purity (dry base): 97% up. Solidifying point (dry base): 47°C up.
Characteristics:	Yellow or light orange crystal, with bitter almond odour; irritative to the skin and poisonous.
Uses and applications:	Manufacture of sulphur dyes; picric acid; saccharine and as dye intermediates.
Packing:	In 300-kg. iron drums.
Precautions:	Keep in cool place and away from direct sunlight. Avoid contact with skin.

NAPHTHALENE (REFINED)

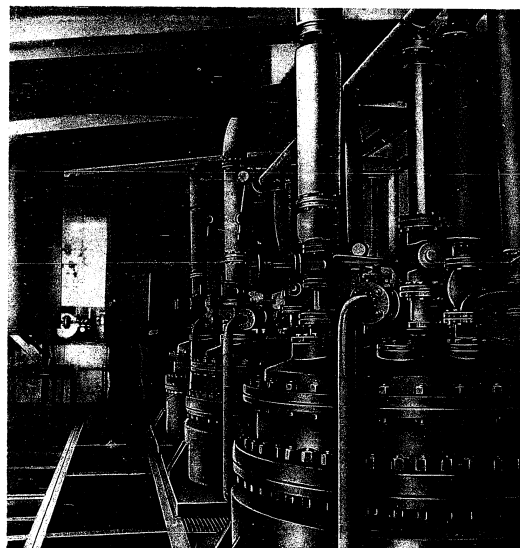

Specification:	Melting point not lower than 79°C.
Characteristics:	White or slightly yellowish, with pungent odour and easily volatile.
Uses and applications:	Insecticides; dye intermediates.
Packing:	In 25-30kg. five ply kraft paper bags.
Precautions:	Keep away from fire.

ANILINE

($C_6H_5NH_2$)

- Specification:** Aniline content (dry base): 99% up.
- Characteristics:** Light yellow to brownish oily liquid, with pungent odour and poisonous.
- Uses and applications:** Dye intermediates; dyeing and printing; raw material for the manufacture of accelerator and antioxidant in rubber industry; perfume and pharmaceutical industries.
- Packing:** In 200-kg. iron drums.
- Precautions:** Keep in cool dry ventilated place and away from fire, sun light or dampness; and avoid contact with skin.

SULFONATED COAL

Specification:	Softening value: Ton degree/cubic meter not less than 900.
Characteristics:	Black granules, size will be doubled when wetted by water.
Uses and applications:	Water softener; especially used in boiler water or water for bleaching and dyeing purposes.
Packing:	In 50-kg. wooden cases, lined with 2 ply kraft paper.

RODINE

Specification:	Available ingredient not less than 25%.
Characteristics:	Light yellowish powder, poisonous.
Uses and applications:	For cleaning iron rods, discs, before enamelling and electro-plating; also used for cleaning machine parts and boiler tubes. For preventing acid fog-making in metal works.
Packing:	In 20-kg. iron drums.
Precautions:	Keep away from dampness and heat.

PAINTS

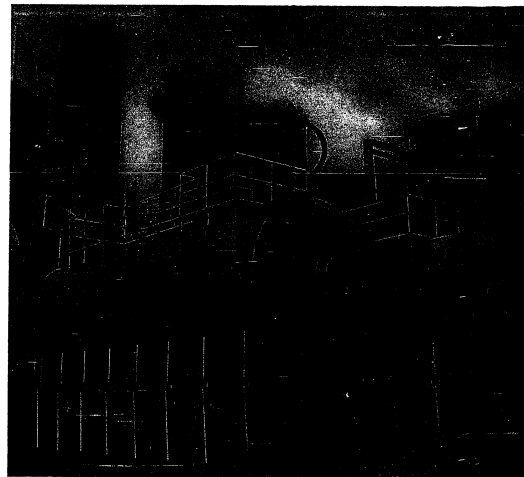

Specification: Various types of quick-drying enamels, ready mixed paints and paste paints.

Characteristics: Enamels: quick-drying, with a layer of lustrous film after painting.
Ready mixed paints: paints mixed with solvents, easy to apply and with bright film after painting.
Paste paints: with high content of pigment, should be diluted with boiled paint oil when applying.

Uses and applications: Suitable for painting iron or wooden furnitures and buildings.

Packing: Quick-drying enamels: In $\frac{1}{4}$, $\frac{1}{2}$, 1 lb. tins.
Ready mixed paints: In $\frac{1}{4}$, $\frac{1}{2}$, 1 gallon tins.
Paste paints: In 28 lb. tins.

Precautions: Keep containers tightly closed to prevent from infiltration of water and other foreign matters; store in dry, ventilated place.

EPHEDRINE HYDROCHLORIDE (RED HORSE BRAND)

Specification:	B. P. 1953
Characteristics:	White crystals or 80 mesh powder. Odourless, bitter taste.
Uses and applications:	Pharmaceutical purpose.
Packing:	In 5 kilo tins, 6 tins to a wooden case. In 1 kilo tins, 30 tins to a wooden case. In 1 lb. bottles, 30 bottles to a wooden case. In 1 oz. bottles, 200 bottles to a wooden case.

LIVER INJECTION CRUDE

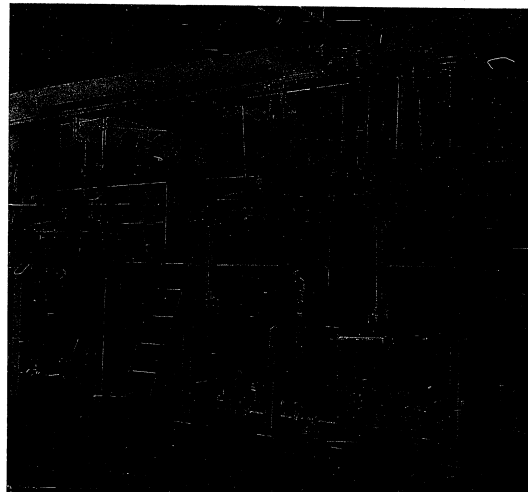

Specification: U. S. P. 14

Description: Hematogenic tonic, Nutrient, Sanguinopoietic substances derived from fresh cow's liver. Brownish water injection, standardized to containing 2 U.S.P. injectable units per ml.

Action and uses: For treatment and prophylaxis of pernicious anemia, anemia due to hemorrhage or tuberculosis, parasitic anemia; dysfunction of reticulo-endothelial system; intoxications by drugs or chemicals; severe gastrointestinal manifestations; and postoperative restoration of liver functions.

Packing: 10 ml. vials, each ml. contains 2 U.S.P. units.

Storage: Preserve the Injection preferably at a temperature not above 20°C and protected from light.

PEPSIN

Specification: B. P. 1953

Description: Proteolytic enzyme obtained from fresh mucous membrane of cow's stomach; colourless or light buff-coloured, amorphous powder of faintly meaty odour; slightly acid or saline taste; soluble in water, yielding an opalescent solution; insoluble in alcohol (95%) and ether; 1 gm of pepsin digesting not less than 2,500 gm of coagulated egg albumen.

Action and Uses: Digestant, converting native proteins into peptones and proteoses. For use in gastric achylia and gastric indigestion.

Packing: Bottles of 25 gm, 50 gm, 100 gm and 500 gm.

Storage: Should be kept in a well-closed container and stored in a cool place.

PANCREATIN

Specification: B. P. 1953

Description: Powerfully digestive enzyme derived from fresh cow's pancreatic tissue, containing pancreatic enzymes amylase, trypsin and lipase; buff coloured; amorphous powder of meaty odour; soluble in water, forming a slightly turbid solution; insoluble in alcohol (95%) and ether.

Action and Uses: In alkaline medium can digest starch, proteins and fats; exerts no enzymatic activity at the acid pH of the gastric juices, therefore it must be taken with sodium bicarbonate.

For use in serious diarrhea due to disturbed external secretion of the pancreas, achylosis, amyza, chronic intestinal catarrh, and various types of dyspepsia.

Packing: Bottles of 25 gm, 50 gm, 100 gm and 500 gm.

Storage: Should be kept in a well-closed container and stored in a cool place.
